Product Information Pro Pressure Sprayer 458

Very sturdy pressure sprayer for professional use.
With new stable stand.

For use with plant protection liquids for medium sized areas, in green houses, tree nurseries, horticulture and for landscape operations.

Advantages for the user

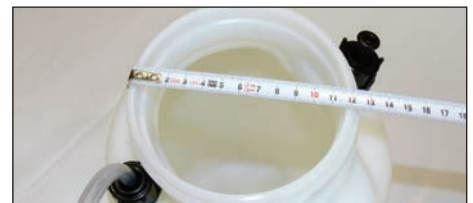

- Ideally suitable for the professional spraying of plant protection liquids in smaller areas, in green houses, in horticulture and landscape work.
- To improve the stability the 11 liter container stands on a new stable and safe stand.
- Very robust design: Extremely resistant with stable base for demanding work conditions. The container is transparent and features imprinted fill level markings. The wall thickness of the tank is ca. 7 mm. UV stabilizers have been added to the polyethylene material for extended service life.
- The filling aperture has a diameter of 11 cm to allow spill-free filling and easy cleaning of the container.
- The complete pump with screw lid is easily detached from the container.
- High performance and easy to use pump. The ca. 340 cm³ stroke volume provides an effective and rapid pressure build up.

Accessory:

A handy wheel set, consisting from big, strong wheels incl. axle and a handlebar for easy tilting and moving the sprayer.

- The automatic pressure control valve can also be used manually. It automatically limits the tank pressure for the safety of the operator. This valve also allows manual release of any tank pressure for refilling or cleaning at the end of the job.
- The comfortable and large pump handle is made of highly resistant material with two clamp fittings. These fittings accept all plastic, brass or carbon spray wands that are available from the SOLO accessory platform to hold them safely and protected. A quarter turn of the handle is all that is required to switch its function from pumping to carrying.
- A particularly strong, kink free and re-enforced spray hose with 1.4 m length permits a wide spray area.
- The strong spray valve handle features a release lock. The handle is comfortable and reduces operator fatigue.
- The spray wand is made of flexible and near unbreakable plastic material.
- The sprayer is supplied with a two-part hollow cone nozzle and a flat spray nozzle.
- Large SOLO accessory range.

Extremely robust container with large filler opening.

Other accessory: Compressed air valve connection to pressurize tank without pumping manually.

Large pump design

Model	458
Bestell-Nr.	45802
Piston pump	•
Nom. volume	11,0
Max. spray pressure bar	3,0
Weight empty kg	2,9
Spray hose length m	1.4 braided
Spray wand	Plastic, 50 cm
Supplied nozzles	SOLO flat spray nozzle and hollow cone nozzle
