

NYCKELHARPA QUICKSTART GUIDE

Congratulations on your purchase of a Bartlett Nyckelharpa Mic.

1. Place the foam mount under the tailpiece. Position the mic midway between the sound hole and the bridge as shown.

Mic placement behind the bridge sounds bright, mic placement near an f-hole (but not over it) sounds warm.

The foam mount can also fit under the strings between the bridge and tailpiece. That lets you place the mic nearer to the bridge and f-hole. If necessary, you can wrap some foam or felt around the foam mount to make it bigger. This can be an effective mounting for a Silverbasharpa or Kontrabasharpa.

2. Connect the mic's XLR connector to a mixer mic input.

3. Turn on phantom power and enjoy your mic's natural sound!
