Rotary Actuator

The VRAD-1510 is a limited rotation Versatile Rotary Actuator Device featuring a magnetic spring return, very wide-angle capability and linear current versus angle profile.

The high coil resistance allows for low power consumption, and access to two individual drive coils allows flexible single-supply unidirectional or bidirectional operation as well as dual-supply operation. Front and rear shafts allow multiple points of attachment, or the use of an encoder or position sensor for closed-loop operation.
