How to attach your Creepy Claws

1. Clean claws by using rubbing alcohol or soapy water. If using soapy water make sure claws are thoroughly dry before applying. After cleaning, handle claws by edges only to prevent oil from your hands re-soiling the surface of the claws.
2. Remove adhesive from package (FIG 1). Each piece of finger nail tape can be trimmed as needed. Select a precut piece of tape for each finger. Carefully remove a piece of tape and place in onto your nail (FIG 2 & 3). Use one piece for each finger. Press and hold firmly.
3. Carefully remove the tan protective covering (FIG 4). Select a claw and match it to the appropriate finger. Apply each claw to each finger lightly, if you misalign the claw, simply detach it from the nail and reapply. Once the claw is properly attached to the finger, press down and hold it to the nail for a few seconds to ensure it has attached properly. Repeat for all fingers. (FIG 5 & 6).
4. To remove the claws, simply pull up on the tip of the claw. If it does not want to come loose, simply soak in hot water for 30 seconds and it will come right off. If the adhesive becomes stuck to your nail, use hot water as before and roll the adhesive off the finger.

TIPS

- Manicure scissors or a sharp blade can be used to trim the excess adhesive from the claw using the face of the claw as a guide if necessary.
 - If a nail comes off, reapply it quickly before the adhesive becomes soiled.
 - If you are wearing a costume that would require you to unzip in order to use the restroom, attach a string to the zipper flap using a small safety pin to allow you to pull the zipper up and down by grabbing the string carefully with your thumb and forefinger.
- Note:** Do not use nail adhesive to attach the claws as the claws will become very difficult to remove. Do not attempt to remove them yourself. Have a trained nail technician remove them for you.

WHITE GLUE- After securing the claws to your fingernails, white glue (like Elmer's brand) can be used around the base of the claw to create a 'cuticle'. This will add strength and realism to the final fit and look.
