Never leave your baby behind!

Every year, more and more children are left behind in burning hot cars! Why, because we get distracted between phones, schedules, ...and the results are often deadly. The statistics are alarming!

Elepho: a company known for enhancing quality of life for families, has developed the eClip, which is designed to save lives and protect your children.

eClip helps you monitor the inside car temperature so it's comfortable for your child; most importantly it also helps prevent a child from being left behind when you leave the car.

- **Easy to use** - clips to car baby seat, diaper bag, back seat belt or anywhere inside your car
- **Connects to your smartphone** - low-energy Bluetooth sends alerts to Android or iPhones
- **Smart app** - alerts if you walk more than 15 feet (5m) away from your car
- **Keeps baby comfortable** - lets you know if it's too hot or cold in back seat while travelling
- **Saves power** - eClip turns off automatically when not in use
- **Patent Pending** - technology to protect the most precious things in your life - your children!
- **No smartphone?** - we will soon launch our eFob for your key ring that sounds an alarm

We believe parents will benefit from the eClip but nothing can replace responsible parenting – please remember after every journey to check if you have removed your child from the car.
