Parts needed for assembly using method #505

- Standard c-frame
- Standard AG10 core (with fastening tabs)
- Hex head screw (provided)
- Side wall screw (supplied by contractor)
- Hex. head screw driver (provided)

Disclaimer:
This step by step layout is one of the many ways someone can install their custom grille using method #505
Step 1:
Remove the core from frame by removing all the hex head tab screws, using the hex head screw driver that is provided. (If installing multiple grilles be sure to keep cores and frames together for easier installation).
Step 2:
Place frame into your opening.

Attach frame to floor sidewall using sidewall screws (supplied by contractor).

Screw through the provided holes in the sidewalls as necessary.
Step 3:
Reattach core to frame using hex head screws and the hex head screw driver provided.
Installation complete.

Save hex head screw driver for later use.
