June 5, 2015

To Whom it May Concern,

Please be advised that Mr. Alberto Salazar has been under my care since his ventricular fibrillation arrest in 2007. I have seen him at least annually since then.

In the context of my professional relationship with Mr. Salazar, I am aware that he had been prescribed Androgel by Dr. Harp for fatigue in the setting of low serum testosterone levels. He did consult with me about the safety of continuation of this medication after his cardiac diagnoses. The risks and benefits of continued Androgel therapy were discussed in detail, and ultimately we decided that the cardiovascular benefits of preserving his energy level and ability to exercise outweighed the small risk of continued Androgel use.
