Configuration Information - Factory Integrated Models

NOTE: This section lists some of the steps required to configure a Factory Integrated Model. To ensure only valid configurations are ordered, HP recommends the use of an HP approved configurator. Contact your local sales representative for information on CTO product offerings and requirements. NOTE: HP does not allow factory integration of options into standard models listed above. Configure-to-order servers must start with a CTO Chassis. NOTE: FIO indicates that this option is a factory installable option.

Memory

NOTE: Memory configurations listed do not apply to "Factory Integrated Models".

DIMM installation guidelines:

- 1. All DIMMs must be PC2-5300 Registered DDR2 DIMMs (667 MHz) or PC2-6400 Registered DDR2 DIMMs (800 MHz).
- 2. PC2-6400 DDR2 DIMMs are only supported with the AMD Opteron processor Models 2376 HE, 2378, 2381 HE, 2382, 2384, 2387, 2389, 2425 HE, 2427, and 2435.
- 3. Both DIMM slots in a memory bank must be populated.
- 4. Both DIMMs in a memory bank must be identical.
- 5. Processor 1 memory bank A must always be populated.
- 6. DIMM banks are active only when the corresponding processor socket is populated.
- 7. If installing only one bank on a processor, populate the bank physically farthest from the processor.
- 8. If mixing DIMM sizes on the same processor, the largest capacity DIMMs must be populated in the bank physically farthest from the processor. The smallest capacity DIMMs must be populated in the bank physically nearest the processor.
- 9. For optimal performance in most applications, populate the first memory bank for every populated processor socket.
- 10. The memory bus will operate at 800 MHz with four (4) or fewer DIMMs per processor, 667 MHz with six (6) DIMMs per processor, and 533 MHz with eight (8) DIMMs per processor.
