Sz 6	610	460	395	800	540	390	305	64	53	1

\* Projection of electronic lock (15mm) not included

### CONSTRUCTION

The door is laser-cut from 6mm steel whilst the safe body is formed by a double layer of steel enclosing a fire retardant fill. The safe is powder-coated for long-lasting protection. 20mm diameter plated steel bolts secure the door effectively when locked.

### LOCKS KEY LOCK

AlphaPlus key lock safes are secured and opened by turning the key. The 8 lever, double-bitted key lock used is supplied with two identical keys.

### ELECTRONIC LOCK

AlphaPlus electronic lock safes are fitted with a programmable touch-screen lock incorporating patented technology which can accept two independent codes of between 4 and 8 digits.

Once programmed, should three consecutive attempts to enter an incorrect code be made, the lock will go into sleep mode for one minute. Three further consecutive incorrect attempts will result in a five-minute time out. Audio and visual confirmations during use ensure that the lock's status is easily understood. A visual low battery warning prompts the user to change batteries when required. The anti-tamper vibration alarm is armed by the user as and when required. Once set, an audible alarm is triggered should the safe be physically attacked.
