## Vecta Personal Safe – Gunmetal Grey

### Introduction

The Vecta Personal Safe is a compact wall mounted safe designed to secure but give comfortable easy access to everyday essential items when they are required. It is ideal for securing home, car, office and spare keys; passports, ID documents and spare credit cards; data on USB flash drives and back-up discs; cash and personal items.

The Personal Safe is designed to be located at eye-level on a solid interior wall and with its slim profile and unique, smooth-edged registered design, it blends comfortably into most modern home or office interiors.

The registered design also gives added strength, helping it achieve Secured by Design and Sold Secure Bronze accreditation.

### Features

The blue LED display with large easy-to-read numerals makes the safe easy to use, with messages indicating when the safe is opened, closed, or requires battery replacement. The beep when the keypad keys are pressed can be switched off, but, for security, the beep which sounds when the safe is opened cannot be silenced.

The Vecta Personal Safe comes with a built-in key rack for hanging items whilst small items, such as earrings and cufflinks, can be stored in the removable valuables tray.

Fast, electronic operation and motorised steel bolts allow one-touch locking and automatic opening, when the correct 4-digit User Code has been entered.

In addition to the 4-PIN User Code, the Vecta Personal safe also has a secondary Administrator Code, which can be used to open the safe if the User Code is forgotten.

If all codes are lost, the Personal Safe can still be opened using one of the two override keys supplied with each unit.
