# TW

# UNDERCOUNTER TRAYWASHER OPERATOR MANUAL

#### **General Warnings**

Non-compliance with warnings or failure to follow the instructions in this manual can result in loss of life, severe personal injury and / or serious damage to property.

Before installation, commissioning and / or repair of the machine you must carefully read the safety instructions and warnings and all warning labels attached to the machine.

Hazards can include high surface temperatures, hot water, caustic detergent, sharp edges including broken glass and knives left in the wash chamber, and dangerous electrical voltages.

All service work must be carried out by qualified personnel only who ensure compliance with all local codes and standards including AS/NZS 3500.1.

The electrical supply must be turned off at the wall before accessing the machine for servicing. All electrical terminals must be covered at all times to prevent access to the terminal. Appropriate electrical tests must be carried out after any and all service repairs.

#### **Important Information**

Failure to comply even partially with the instructions given in this manual will invalidate the product warranty and relieve the manufacturer of any responsibility. This includes failure to supply the machine with good quality water at suitable pressure as specified.

The alteration of machine operation or design or replacement of parts not approved by the manufacturer may void warranties and approvals.

This machine is intended for commercial use only. It is designed for the cleaning of fresh food waste from cutlery, crockery, glassware, containers and food preparation equipment. Consult the manufacturer regarding suitability for other applications.

No part of the machine is designed to be stepped upon. It is not a waste disposal unit

It is essential that operating procedures are followed including adequate prerinsing or scraping loose soil or waste from washware before it is placed in the machine, and regular cleaning and maintenance of the machine.

The information contained in this document is checked, reviewed and updated regularly to ensure that it is accurate and relevant to the model described. However discrepancies and errors can occur. We welcome your feedback.

This document subject to change without prior notice.

Information supplied in this manual is copyright. No part of this work may be reproduced or copied in any form or by any means, electronic or mechanical without the express permission of Washtech.

### **Safety Instructions**

#### **Installation**

- Use qualified, skilled personnel.
- Follow installation instructions.
- Connect to correct voltage and supply current.
- Provide fully accessible Electrical Isolation Switch & water supply valves.

#### **Training and Supervision**

- Read and Understand the Operating instructions and train all staff.
- This appliance must not be operated by children or infirm persons.
- Machine panels must only be removed by suitably qualified and trained personnel internal hazards include live electrics and very hot surfaces.
- No part of this appliance is intended for use as a stepladder.

#### **Hot Surfaces**

• Some surfaces may be hot or very hot.

#### Chemicals

- Commercial dishwashing detergents are hazardous handle with care.
- Read and follow the safety information found on the labels of detergent containers and Material Safety Data Sheets.
- Use protective evewear and clothing if decanting containers.

#### **Hot Water**

- Do not put hands in wash water which may be over 60°C and contain hazardous caustic detergent.
- Rinse water can be over 90°C.
- Door safety switches are designed for emergency use only.

#### Cleaning

- Do not hose down the machine or splash water over the exterior.
- Watch for broken glass etc. when cleaning the inside of the machine.

#### Warnings

Equipment contains dangerous voltages and can be hazardous if installed or operated incorrectly. Non-compliance with Warnings or failure to follow the instructions contained in this manual can result in loss of life, severe personal injury or serious damage to property.

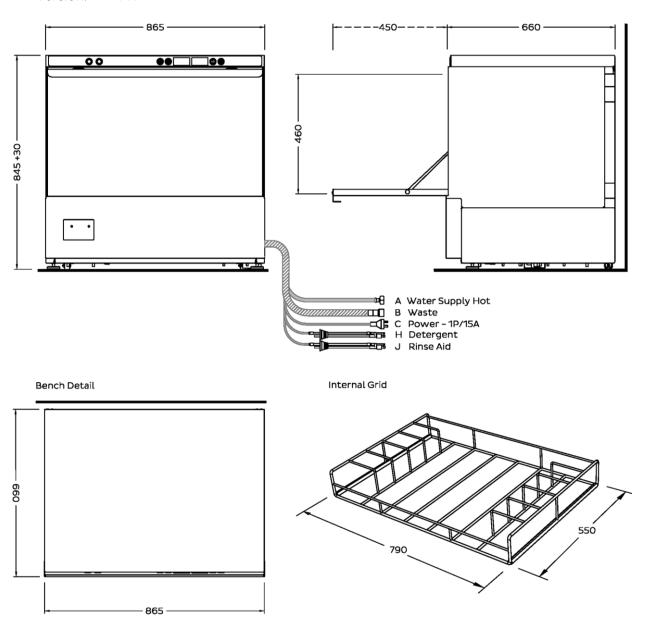

Installation and servicing must be carried out by a suitably qualified person in compliance with all local codes and standards including AS/NZS 3500.1.

# **Installation Diagram**

#### TW Installation Diagram

Part #: TW0020Date: 13/06/2018

Version: 1-A

#### Services

A Hot water 65°C

B Waste

C Electrical connection

200-350 kPa Flexihose supplied 3/4" 25mm

230-240V, 50Hz, 1P-N+E~

15A

Note: Isolating switch must be within 1m of, and not directly behind the machine. Isolating water valve must be readily accessible

### **Installation Instructions**

#### **Machine Positioning**

- Unpack machine, check for damage and complete delivery.
- Install machine on sound waterproof self-draining floor and use adjustable feet to level machine.

NOTE: Failure to level the machine correctly may result in leaking during the cycle, overflowing from the door sill, poor hygiene through the wash tank not being able to drain correctly, and/or visibly uneven door.

 Allow room for detergent to one side of machine or in adjacent cupboard. 20 litre container requires approximately W 250mm x D 350mm x H 450 mm, but smaller containers are available from many suppliers.

#### **Inlet Water**

Incoming water should be within the following standard requirements:

• Temperature: 65°C.

NOTE: Low temperatures will increase the recovery time between cycles and depending on the chemical being used, may result in excessive foaming if the machine is started before the wash water is up to a suitable temperature.

NOTE: Excessively high temperatures may damage the solenoid which can result in flooding should this component fail. High temperature solenoids are available and can be retrofitted if necessary.

• Connection: 20 mm (3/4" BSP) male – flexible hose supplied.

NOTE: Flush supply line before connection. Poor quality supply or excessive water hardness may affect performance or damage machine – filtration and/or softening is recommended.

- Flow rate: minimum 20 litres per minute.
- Pressure: between 200 and 350 KPa

NOTE: NOTE: If above 350kPa fit pressure limiter valve (LPV). Do not use small diameter plastic supply lines.

Note: if below 200 KPa fit a rinse booster pump.

- Consumption: Approximately 3.3 litres per cycle.
- Backflow prevention: Atmospheric Vacuum Breaker (AVB) fitted standard.
- Watermark Certification #08603.

#### **Water Quality Requirements**

The incoming water should also be within the following parameters:

Hardness	ppm		рН			
min	20		7			
max	100		8			
lons	Cl-	$SO_4$	Fe	Mn	Cu	$Cl_2$
Max mg/L	100	400	0.1	0.5	0.05	0.1

NOTE: Levels above or below the stated requirements can be expected to increase component wear and reduce the expected useful life of the dishwasher. If in doubt, it is best to consult a water specialist and have the incoming water professionally tested and treated if necessary.

#### **Power**

• Electrical supply required is 1P+N+E, 230V 50Hz 15A per phase via switched outlet adjacent to machine.

NOTE: Equipment contains dangerous voltages and can be hazardous if installed or operated incorrectly. Non –compliance with warnings or failure to follow the instructions contained in this manual can result in loss of life, severe personal injury or serious damage to property.

### **Installation Instructions**

#### Chemical

- This dishwasher is supplied with Detergent and Rinse Fluid injector pumps
- To connect to chemicals, insert pump inlet hose into container of commercial low foam detergent and rinse fluid.
- To prime the detergent, press the detergent prime switch on the machine control panel until supply hose is refilled.
- To prime the rinse fluid, press the rinse fluid prime switch on the machine control panel until supply hose is refilled.

NOTE: Externally adjustable chemical pumps are fitted and pre-set at an average level, these need to be calibrated on site according to the chemical being used and site specific conditions such as the water quality and how the machine is being used. Failure to do so may result in excessive dosing which can result in foaming and overflowing, or insufficient dosing which can cause inferior wash results and impact components through a build up of grease. If in doubt, contact your chemical company for assistance. NOTE: Commercial detergents can be hazardous – read instructions, store safely and handle with care. Care needs to be taken when changing chemicals, ensuring that the

#### Waste

- A drain pump and drain vent loop are fitted standard on this machine.
- The recommended installation of the drain hose is into a standpipe.
- For drain hose installation into a standpipe, the hose should be lifted no higher than 350mm above the machine base to avoid water returning to the wash tank after draining.
- For drain hose installation into a sink waste connection, the drain hose must be secured to a point at least 50mm higher than the sink drain connection. This will avoid water potentially back-flowing from the sink into the dishwasher. For undercounter installed machines with a sink waste connection a small amount of water will return to the wash tank after draining.

NOTE: Failure to correctly connect the drain hose and ensure correct plumbing is in place beyond this may result in blockages, backflow from the sink and/or flooding of the machine.

NOTE: Either copper or P.V.C. may be used for the waste connection – P.V.C. is more resistant to some harsh detergents. Some authorities however suggest that copper is required because the machine rinses at up to 90°C. It is important to note that rinse water mixes with the 65°C wash water before discharge and then flows into the sink trap where the water is further cooled before entering the drainage plumbing. We recommend consulting your local authority to ensure your site remains compliant.

#### **Installation Checklist**

• Complete attached Installation Checklist to ensure machine is installed and running correctly, and operator is familiar with operating procedures.

# **Installation Checklist**

### **Installation Troubleshooting**

#### Door not closing properly

· Level the dishwasher.

#### Machine not starting or filling

- Ensure water supply to machine is turned on.
- Ensure power supply to machine is turned on.
- Check that the water inlet hose isn't twisted or kinked.

#### Cycle taking too long

- Check inlet water temperature is not too low as per our specifications.
- This machine ships with Thermostop enabled, which allows a cycle to be started at any time, even if the rinse water is not up to required temperature. To ensure a hygienic result, the wash cycle continues to run until the rinse temperature reaches the required 83°C. At this stage washing will stop and the machine will begin rinsing to complete the cycle.

#### Poor wash results

- Check that there are adequate pre-rinse processes in place and staff use longer cycle options for more heavily soiled items.
- Ensure high quality non-foaming commercial dishwasher detergent has been connected at the correct dosage for your site, water quality and application. If uncertain, consult a chemical specialist.
- Check that the wash arm is spinning freely and is not being obstructed.
- Ensure that the wash temperature is between 60°C and 65°C.

#### Chemical residue on items after the cycle

- Check that nothing is obstructing the wash/rinse arms from rotating.
- Check the rinse fluid dosage is not too high. If uncertain, please consult a chemical specialist.
- Check detergent dosage is within the requirements.

#### Dishwasher is foaming

- Ensure there is no other soap being transferred into the machine from the sink.
- Ensure high quality non-foaming commercial dishwasher detergent has been connected at the correct dosage for your site and application. If uncertain, please <u>consult a chemical</u> specialist.
- Allow wash water to heat to at least 60°C prior to starting the first cycle as some commercial dishwasher chemical will foam at low temperatures.

#### Other equipment in the kitchen has needed filters or has scale

- Due to the high temperatures in dishwashers, scale will build up in the wash tank, on the arms and in the rinse tank. The incoming water should be treated. If uncertain, please <u>consult a</u> water specialist.
- As with combi-ovens, high chloride levels will do irreversible damage to a number of the components inside a commercial dishwasher. The incoming water should be appropriately treated. If uncertain, please consult a water specialist.

#### Cycle times not suitable for items being washed

• Some sites may require longer/shorter cycles depending on the items being washed and the soil levels. Cycle lengths can be adjusted by a qualified service agent accessing the WI-200 Electronic timer. For adjustment instructions refer to the adjustment section of the Service Manual for the model or the WI-200 Service Manual.

### **Operator Use Guide**

#### **START**

- Turn on at wall
- Ensure the Drain Filter (3) and Wash Pump Filters (2) are firmly in place.
- Check the Scrap Trays (1) are in place and shut door.
- Press the Power button, the button will glow red and the machine will fill automatically.

#### **OPERATION**

- · Load items into the machine and shut door.
- Select either Cycle 1 (2 minutes) or Cycle 2 (4 minutes) button to start a cycle.
- Both Cycle buttons glow green while machine operates.
- When Cycle lights go out, the cycle is complete.

NOTE: The machine may be started while the rinse water is being heated – the machine will continue to run the wash cycle until the rinse water is up to temperature.

#### SHUT DOWN - EVERY NIGHT

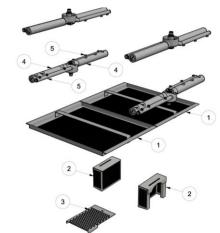

- Open the door and press the Drain button, leave the door open.
- Allow to drain for approximately 1 minute or until the tank is empty.
- Turn the Drain and then the Power buttons off.
- Once the machine has cooled down, clean the wash tank, then remove and rinse Scrap Trays (1) and Wash Pump Filters (2) before replacing back in machine.

#### **CLEANING - AT LEAST ONCE A WEEK**

Remove, rinse and replace when machine has cooled down:

Scrap Trays 1
Wash Pump Filters 2
Drain Filter 3
Wash Arms 4
Rinse Arm 5

Inspect and clear all jets in the upper and lower Wash/Rinse Arms using a small object such as a toothpick where necessary to remove any blockages prior to rinsing.

#### SUGGESTED BEST PRACTICE

Pre-rinse Scrape and/or rinse trays, plates & glasses in cool water.

Chemical Chemical alarm lights indicate when a chemical drum is empty. Replace

chemical and press the corresponding prime switch until supply pipe is

refilled.

Use a good quality non foaming commercial detergent and drying agent – do not use domestic detergents which will cause the machine to foam.
