

Liquid Dysh

Machine Detergent

LIQUID DYSH is a non-chlorinated, caustic, liquid detergent. It is a concentrated blend of biodegradable wetting agents and potassium based ingredients which prevent formation of foam in the wash water throughout the washing cycle. *LIQUID DYSH* assures optimum results in any water condition.

Recommendations

LIQUID DYSH is dispensed electronically into the wash water from the shipping containers. *LIQUID DYSH* should not be used on aluminium or in older type machines where the fittings are of soft metal. For effective operation refer to equipment manufacturer's specification manual and consult your representative for program details.

For best results a concentration of approximately 2 1/2 oz per 10 gallons of water should be maintained, with warm water temperature conditions.

Code	Size	Special notes
34596	4 x 4 L/case	

Use/Benefits

- Quick grease cutting action.
- Effective in hard and soft water.
- Easily dispensed and economical to use.
- Generates copious stabilized foam.
- Rinses freely.
- Safe on all water washable surfaces.
- Leaves no residual odour on eating utensils.

Physical Properties

Appearance: Clear dark pink liquid

Odour: Odourless

pH: 13.0 - 14.0

Specific Gravity: 1.345
