

Pregnenolone 25

Pregnenolone is an endogenous steroid hormone synthesized from cholesterol. As a “parent hormone”, pregnenolone can be converted to other hormones, including sex hormones. For example, pregnenolone can be converted to DHEA, the precursor of androstenedion, which is the precursor to testosterone and estrone. Alternatively, it can also be converted to progesterone, which may be further converted to cortisol.

Pregnenolone is also a neurosteroid having anxiolytic properties. It is found in high concentrations in the brain, where along with other neurosteroids, it impacts synaptic function, is neuroprotective, and enhances myelinization.

Pregnenolone 25 supplies 25 mg of pregnenolone per capsule.

WARNING:

Pregnenolone 25 should be used only under the direct recommendation and supervision of a physician or qualified healthcare professional. It is for adult use only, and is not recommended for individuals under 18 years of age, pregnant or lactating women, or any person who suffers from a condition such as breast cancer or prostate cancer that might be made worse by exposure to estrogen. Pregnenolone may affect other hormones such as progesterone, estrogen, testosterone and/or DHEA. Do not take this product if you have a history of seizures.
