

Gemini<sup>®</sup>Infrared Heater
Technology Emulates the
Efficiency of Solar Energy
in a Convenient Package for
Hundreds of Industrial and
Commercial Applications

## Gemini™ Medium Wave Heaters

Twin Bore Quartz Tube Technology

#### **Design Features**

- \* Industry standard twin bore quartz tube formats with 95% heat transmittance
- \* 24-karat Gold Back Coating for targeted infrared applications
- \* White Ceramic Reflective Back Coating for extreme temperature requirements
- \* High power densities: 42/51/63.5 w/in (16/20/25 w/cm)
- \* Fast heat-up rates Less than one minute to reach steady state conditions
- \* Very long operating life Over 10,000 hours of highly efficient and economical continuous operation
- \* Three industry standard sizes in lengths up to 118 in. (3000mm)

Complete Infrared Heat Technology for Every Industrial and Commercial Application Under the Sun

**Gemini Series** 

#### **Medium Wave Infrared E-Mitters**

Tempco has developed specialized coatings to control the directional nature of the infrared energy emitted from the Gemini twin bore heaters. High levels of energy reflection are achieved by selectively bonding an integral high temperature coating to the half-hemisphere of the quartz tube surfaces facing away from the targeted surface. The choice of a gold or white ceramic coating depends on the maximum operating temperature required in the heating system. Also available is a clear 360° E-Mitter for use in applications that will employ external reflective or focusing surfaces around the heater.

#### **Gemini Series**

#### Medium Wave Infrared E-Mitters

#### SPECTRAL EMISSIVITY OF PET FILM

**WAVELENGTH CONTROL** – The very low heat transmission losses through the clear quartz material of the twin bore heaters allow Tempco's engineers to carefully design the peak emitted wavelength of these heaters to match the peak absorption wavelength for a given material or application. By modifying the temperature of the E-mitter, its peak emitted wavelength will change according to Wien's displacement law (see page 7-101). All E-

mitters will emit a range of wavelengths above and below their peak value. (See spectrum graph on page 7-97.) The design of an efficient infrared heating system must consider both the spectral nature and directional properties of thermal radiation.

**SPECTRAL NATURE**: To address this issue, heaters should be designed to emit wavelengths that closely match the absorption band of the processed material in a given application. By carefully considering the broad side-bands of the emitted radiation and absorption, it is possible to design systems that will enhance the heat transfer rates at different stages of the heating process.

#### Infrared Energy Spectrum Emission

Vaporization of water is best achieved in the infrared spectrum at wavelengths in the range of 3.1 and 6.1  $\mu$ m (microns). After the water is removed, the infrared heating rate should match the absorption spectrum of the base material to avoid damaging it thermally. Similar approaches are used in many industries, such as automotive, glass and plastic processing, textiles, electronics and many others.

**DIRECTIONAL NATURE**: The directional nature of the heat distribution is dealt with by consideration of how to direct heat toward an application. The efficiency of the heating system depends strongly on the percentage of the total infrared energy generated at the resistance coil that reaches the target material. Consideration must be given to the fact that this infrared energy propagates from the E-mitter in all possible directions with a non-uniform wavelength distribution.

#### **Design Specifications**

Performance Ratings										
Reflective Backing	Gold	White Ceramic	Clear* (no backing)							
Maximum Coil Temperature	1472°F (800°C)	2012°F (1100°C)	2012°F (1100°C)							
Peak Emitted Wavelength Range (microns)	2.7-6.5	2.1-6.5	2.1-6.5							
Radiation Pattern	180°	180°	360°							
Nominal Reflected Heat Efficiency	95%	75%	0%							

<sup>\*</sup>Clear tubes are designed for use with external reflector.

Electrical Ratings			
Twin Bore Tube Size	18 × 8 mm	23 × 11 mm	33 × 15 mm
Maximum Power Density (per unit length)	42 w/in (16.5 w/cm)	51 w/in (20 w/cm)	63.5 w/in (25 w/cm)
Maximum Voltage	480V	480V	600V
Maximum Amperage per circuit	9.5A	13.5A	20A

Standard wattage tolerance is +5%, -10%; closer tolerances available upon request

CS1: Lead End Cold Section
HL: Heated Length

CS2: Blind End Cold Section

Twin Tube Size Dimensions (a x b)	$18 \times 8 \text{ mm } (.71 \times .31 \text{ in})$	23 × 11 mm (.91 × .43 in)	33 × 15 mm (1.30 × .59 in)				
Maximum Length (OAL)	2000 mm (78.75 in)	2000 mm (78.75 in)	3000 mm (118 in)				
Minimum Lead End Cold Length (Standard CS1) (both ends of double end units)	50 mm (1.96 in)	50 mm (1.96 in)	50 mm (1.96 in)				
Minimum Blind End Cold Length (Standard CS2) (single ended units only)	50 mm (1.96 in)	50 mm (1.96 in)	50 mm (1.96 in)				
Overall Length (OAL) Tolerance	± 2.5 mm (0.10 in)						
Heated Length (HL) Tolerance	±6.5 mm (0.26 in)						

Consult factory for closer tolerances.

# Exceptional Clear Quartz Twin Bore Material with Proven Application Results

→ Automotive: Airbag assembly, headliner formation, roof rack bonding,

mirror manufacturing, flux powder drying, adhesive activation on protective strips, powder coating, spot repair, friction material bonding, plastic bumper drying, forming &

painting

→ *Plastics:* PET bottle blow molding, pellet/granulate drying,

polypropylene fiber fusing, plastic component extruding/bending, ink drying, and laminating

•• Glass: Preheating, coating/paint curing, light bulb production

•• Food Industry: Chocolate processing, cake heating/baking, food warming

→ Paper, Electronics → Metals → Semi-conductor Processing

→ Textiles, → Furniture → And much more

### **Optional Winding Patterns**

Using alternate stretching configurations to achieve distributed wattage, Tempco can easily customize Gemini series heaters to fit your application. Below are various configurations with "A" Standard for Single Ended and "B" Standard for Double Ended.

**Gemini Series** 

#### **Gemini Medium Wave Infrared E-Mitters**

**Lead configurations and lengths** – 842°F (450°C), 600V insulated lead wire, 3/8" stripped ends standard, oriented straight out ends or at 90° to heater axis. Optional styles of high temperature insulated lead wire and un-insulated ring or spade terminals are available to suit your application. Select size and style from charts

on page 7-23. Bare stranded heater leads up to 9" long may be ordered with optional ceramic bead insulators. Longer lengths are available as lead wire options only. When ordering, specify lead orientation, style, length, and terminals.

Gemini Stainless Steel Clamp Specifications and Dimensions									
Clamp Assembly Part Number	CRK00085	CRK00086	CRK00087	CRK00088	CRK00089	CRK00090

#### **Gemini Series**

#### Gemini Medium Wave Infrared E-Mitter Assemblies using a CRA Linear Housing

#### **CRA Linear Modular Housing Assemblies**

These compact assemblies have one  $33 \times 15$  mm twin bore Gemini quartz heater mounted in front of an aluminized steel reflector at a power density of 63.5 w/linear inch.

#### **Design Features**

- \* Rapid heat-up/cooldown and low residual heat retention
- \* Compact lightweight extruded anodized housing
- \* High efficiency aluminized steel reflector for harsh environments and high temperature applications
- \* Adaptable to all Gemini twin bore sizes

#### **Ordering Information**

Select a Part Number from the Standard Sizes and Electrical Ratings table that meets your requirement.

Custom housings are available for any twin tube size  $(18 \times 8 \text{ mm}, 23 \times 11 \text{ mm}, \text{ and } 33 \times 15 \text{ mm})$ ; see page 7-67) Gemini Series Heater. Specify watts, volts and heated length (or w/in) required and TEM-PCO will design a unit to suit your application. Clear, gold, or white ceramic coated heaters and doubled end wiring, and chrome steel reflector options are available.
