

NIXOL TRANSPARENT white

Shading colour

NIXOL is a modern, quick-drying shading colour that wears off in the course of a season.

NIXOL sticks to glass and does not lose its durability. You can simply remove NIXOL with a brush and water or with the chemical glass cleaner FARBANET.

NIXOL type V1 is especially convenient for application on plastic covers.

If wet, NIXOL TRANSPARENT will allow more light to shine through.

Instructions

Before application, dilute NIXOL with cold water as follows:

- To last an entire season: 2 parts water and 1 part NIXOL
- To last for less than one season: 4 parts water and 1 part NIXOL

You can apply NIXOL using a brush, a roller or a sprayer. It is best to apply NIXOL when the weather is dry and warm.

Efficiency: Diluted NIXOL can be used to spray 30-60 square meters. After applying NIXOL, clean tools with water.

When storing NIXOL, protect from frost.
