

COSYGROW N7 (01)
Instructions

Width: approx. 78” / two metres.

Cosygrow is a water and air permeable fleece allowing plants to remain naturally watered and ventilated but at the same time increasing soil temperatures and humidity levels.

APPLICATIONS FOR USE

- To provide frost protection
- To prevent wind, rain and storm damage
- To protect from insects, birds and animals
- To accelerate growth rates of plants and seedlings
- To give added frost protection in the greenhouse or cold frame
- To cover cloche hoops etc., mature shrubs and container grown plants both in the garden and greenhouse.

HOW TO USE COSYGROW

- Lay Cosygrow over the bed as soon as sowing or planting is complete.
- Anchor the edges with Ground Pegs or soil and stones (remember to apply any fertilisers or pesticides before covering).
- Remove for pollination of flowering species such as melons, cucumbers, strawberries, fruiting bushes and trees. Replace if there is any chance of frost.

STORAGE

- Cosygrow may be washed and stored for use over several seasons.
- Store in a dry place out of direct sunlight.
