

Irigo Watering Kit

This Irigo Watering Kit is incredibly versatile, being suitable for watering your garden, plants, indoors or outdoors, in your greenhouse, conservatory etc etc.

Recommended Dripper Settings

Adjust the Dripper settings to suit the type of plants you are growing – recommended settings are shown below.

Plant Type / Plant Height	Small 20-25cm	Average 30-60cm	Large 70-150cm	Extra Large 160-220cm
Woody Plants – yucca, fig, bamboo etc	1	2	4	6
Herbaceous Plants – hibiscus, philodendron etc	2	3	5	7
Fruit & Veg – tomatoes, melon, cucumber etc	2	5	7	10
Outdoor Plants – oleander, roses, hydrangea etc	2	4	7	9
Container Plants – geranium, petunia etc	2	3	4	6
Citrus Plants	2	3	6	6
Shrubs	3	5	9	11
Trees	5	9	11	11

Placing The Dripper Next To The Plant

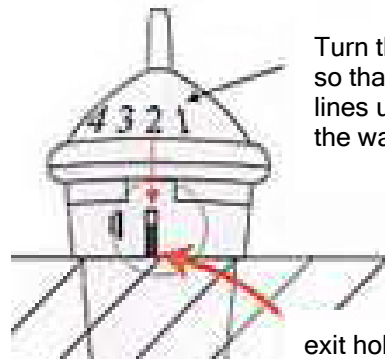

When fixing the dripper into the ground or container place the dripper as close to the main root of the plant it will be watering.

When pushing the dripper down into place ensure that the exit hole on the dripper is NOT in contact with the ground (it should be just above).

Setting The Dripper

Take a few seconds to set the dripper to the correct point.

Turn the top of the dripper so that the desired setting lines up with the exit hole for the water.

Each dripper can water an area up to 10" / 25cm in diameter. Depending on the area being watered will affect how many drippers you will need to use. Please note – when the drippers are first used the water may run faster but the drip rate will settle down to the correct speed after about 7 days.

Attention – for the Irigo drippers to work correctly NEVER put fertilizer in the water.
