Create a pond the smart way

Always wanted a pond but never been sure where to start?

We've curated the ultimate collection of our top products, giving you everything you need to start your dream water feature - all in one box!

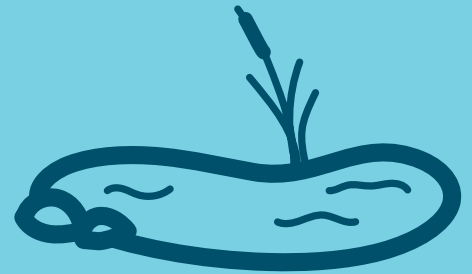

Easily add the sights and sounds of water to your outdoor oasis.

The smartpond Ultimate Pond Kit has everything you need: 7 x 10 ft. pond liner to set the foundation, our reliable 300 gallon per hour pump to circulate the water, a protective filter box with filter pads and bio-balls that clean the water and protect the pump.

Also included is a nozzle kit assembly to add a fountain to decorate and aerate the water, the adorable weather-proof turtle spitter and roll of ½ in. tubing add additional charm and aeration to the pond. The finishing touch: our set of 6 Mini Pond LED Lights so you can enjoy your pond at night too!

Things to consider when planning:

- Will your pond be viewed from indoors?
- Will there be seating nearby?
- Is there potential for expansion or future additions?
- Do you have small children or pets that may be at risk of drowning?
- Will you be adding fish or aquatic plants? What kind?

1 ● safety

- Always dig with caution.
- Call 811 or your local utility company before you begin digging to locate buried pipes or power lines on your property.
- Visit <https://call811.com/> to find your local contact.

Visit <https://call811.com/> to find your local contact.

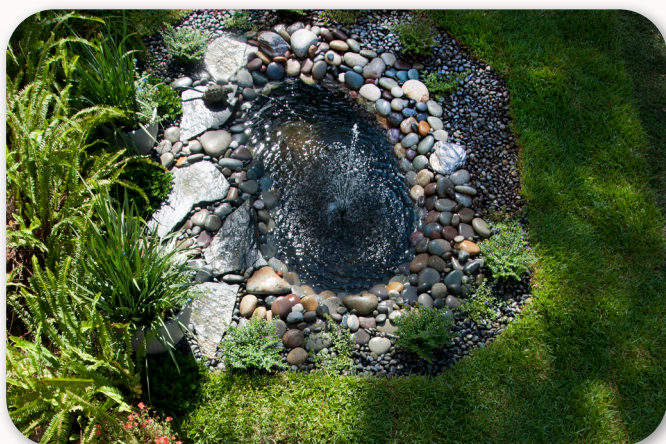

2 ● location

- Consider how the water garden will enhance your landscape and its visibility from many areas.
- Avoid locations under trees because falling leaves can clog the pump, and decay matter can cause water quality issues.
- Consider power. A GFCI outlet must be located near the pond (no extension cords!)

3 • elevation

- Build your pond at the highest point of your landscape.
- If it is located at the lowest elevation of the yard your pond may flood, washing away fish and plants.
- Rainwater run-off can contain fertilizers or pesticides, which impact water quality and fish health.

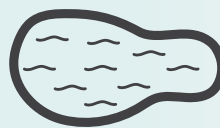

5 • integration

- The size, scale and layout of your pond should complement the other features of your yard, including your landscaping and terrain.
- The Ultimate Pond Kit includes a 7 ft. x 10 ft. liner, allowing for a max pond size of approximately 5 ft. x 8 ft.

4 • sunlight

- How much sunlight do you need?
- If you are going to include plants that require moderate to full sunlight, you will need to choose a location with a minimum of 6 hours of direct sunlight.
- Some shade is important to keep water cool, but keep in mind that trees do lose their leaves.

Safety

Know what's below. Call 811 before you dig. Visit <https://call811.com/> to find your local contact.

Location

Consider: landscape enhancement, visibility from multiple areas
Avoid: locations directly under trees that drop leaves or needles that clog filters and affect water quality.

Elevation

Your pond should not be built on a slope or grade. If it is located at the lowest elevation of the yard, you will have rainwater run-off that can muddy the water, wash away fish and destroy plants.

Sunlight

If you are going to include plants that require moderate to full sunlight, choose a location with a minimum of 6 hours of direct sunlight. Some shade is important, but keep in mind that trees do lose their leaves.

Integration

The size, scale and layout of your pond should complement the other features of your yard, including your landscaping and terrain.
