

iEM-RS Series Integrated Stepper Motor

iEM-RS Series is an integrated stepper motor based on standard Modbus RTU protocol, using RS485 communication can network up to 31 axes. Its built-in PR feature with 16-segment position table (PR Mode) can save additional controllers in most of point-to-point applications, to greatly enhance system reliability and reduce the cost.

The iEM-RS series motors are highly reliable, affordable and perform excellently in many industrial applications such as solar equipment, textile, civil, robotics, power generation equipment, 3C, packaging...

Compare with Step/Direction

- Built-in single-axis control can save the PLC in most of point-to-point applications to reduce cost;
- Built-in rich diagnostic functions and input and output signals to setup easily;
- Modbus brings more expansion possibility to add value;

> DIP Switches

The iEM-RS series use an 8-bit DIP switched to set Salve ID (also called Site Alias), Baud Rate and Terminal Resistance, they are shown as below:

(1) Slave ID: SW1-SW5 (off=1, on=0)

Slave ID	SW1	SW2	SW3	SW4	SW5
default	on	on	on	on	on
1 (factory)	off	on	on	on	on
2	on	off	on	on	on
3	off	off	on	on	on
4	on	on	off	on	on
5	off	on	off	on	on
6	on	off	off	on	on

Note:

(1) When the SW1-SW5 is default (all are on), the Slave ID can be configured by the PC software

(2) Baud Rate: SW6 - SW7

Baud Rate	SW6	SW7
115200 (Default)	on	on

38400 (Factory)	off	on
19200	on	off
9600	off	off

Note:

(1) When the SW6-SW7 is default (all are off), the Baud Rate can be configured by the PC software.

(3) Terminal Resistance Selection: SW8

SW8=ON: terminal resistance is valid;

SW8=OFF: terminal resistance is invalid (Factory setting)

Note:

(1) The last slave in the network needs to connect a 120Ω terminal resistance, it means set the SW8 to on.
