## Scope of delivery

please check for completeness

A = Hammock Combo

B = 2 stainless steel spreader bars

C = 1 utensil bag

D = 2 suspension ropes each 2 m

E = 2 swivel shackles, stainless steel (tied in)

## Not included:

Appropriate ropes are required for suspension over longer distances.

High-quality ropes, weatherproof, seawater resistant, with 1,000 kg breaking load, can be ordered from us.

## Description:

This weatherproof hammock will simply delight you. Because with the COMBO hammock we have broken new ground. The result: Noticeably high lying comfort, a lot of space for lying down and also, like in a Hollywood swing, for 2 people to sit on. Due to the special rope guide and crossbar technology, it is not „tippy“. The COMBO has a practical storage pocket at the head end for a drink bottle, book, magazines, sunglasses or mobile phone. The two knotted V4A swivel shackles at the ends make it easy to attach it with ropes. The COMBO hammock is made of a skin-friendly, breathable micro-grid fabric.

### Technical data that convince:

weatherproof hammock with 2 spreader bars

lying surface 115 cm x 230 cm

Clamping length from 380 cm

Own weight 4 kg

Resting load 250 kg

TÜV-certified

### Product characteristics:

very stable, not tippy, much lying comfort

ergonomic reclining quality

skin-friendly, breathable mesh fabric

allergy tested, Ökotex Standard 100

remains pleasantly cool and airy in strong sunlight

insensitive to rain, sun/UV, sea water

easy-care, robust, durable

### 1. Inserting the utensil bag.

The practical bag has a sewn „tunnel channel“. One of the spreader bars can be pushed through this channel before being inserted into the two retaining thimbles. We have defined the area with the sewn-on Crazy Chair label as the hammock headboard. There should be the spreader bar with the utensil bag.

### 2. Insert spreader bars.

The two spreader bars are inserted at each end of the hammock. Before the spreader bars are put into the black „thimbles“ for the first time, you should shape them with your fingers a little bit as a „trough“ so that the bar ends can be put in more easily and get a good grip.

### 3. Mounting of the hammock.

Choose a suitable place to hang the hammock, e.g. on a hammock stand, between 2 trees or on 2 fixed attachment points.

V4A swivel shackles are attached to both ends of the hammock. Pass the suspension rope through the free eye or the eye of the swivel shackle and pull it through until a loop of the same length is formed.

Attach the ropes to the selected suspension point, which should be approx. 3.80 m to 4.50 m apart.

The ropes are knotted at an attachment height of approx. 140 cm, e.g. to a tree, a hook or a hammock stand.

If the distance is greater, the two suspension points of the combo must be correspondingly higher.

Tie the two rope ends with a simple looped knot.

### 4. Use the hammock.

The hammock should be tightly stretched for easy entry/exit without moving strongly out of the bend of the body. When standing in front of the hammock, the edge of the hammock is at waist level. Ideally, the hammock should be laid down as shown in the phases shown.

Stand in front of the hammock and hold the outer edge of the hammock with both hands.

Pull it under your bottom and sit in the middle of the hammock.

From the sitting position you turn your upper body sideways to the back in the lying position and swing your legs into the hammock.

When you lie down in the hammock for the first time, all knots are loaded by the body weight and the ropes are tightened in length. All thimbles get the perfect shape and the hammock gets its final position. It is therefore a good idea to adjust the hammock position to the perfect desired height (on both suspension ropes).

### 5. Useful tips on transport, storage and care.

In strong winds the hammock could flutter or turn propeller-like in the wind. Depending on the intensity of the „windbeat“, it can also be stressful for the material or micro-grid fabric. The windblow can cause the coloured filament of the covering to rub and partially peel off. This results in unsightly colour peeling. However, the stability of the hammock is maintained.

Note: Damage to material due to strong wind is not covered by the warranty, as it can be avoided if used correctly. If, for example, you remove the two spreader bars from the thimbles of the stretched combo, the hammock will collapse flat and have less wind attack surface (but it must not rub over the ground in this state) or, even better, you can take the hammock down in time and not expose it to the wind.

The All-Weather material was developed for outdoor use (can also be used indoors) and is insensitive to sun and moisture.

To clean the hammock, all you need is a sponge with water or a little soapy water. Under no circumstances use the high-pressure cleaner or the washing machine.

For storage, the hammock should be loosely rolled, but not folded. The folding kinks can cause the fabric to break.

When storing, the hammock should be protected from mice or similar rodents.

The Crazy Chair logo is placed on the lying side in the head area for orientation. The black straps point to the underside of the hammock.

## Use and safety instructions

Read the manual before use and keep it for further questions.

The CrazyChair hammock is ideal for relaxing, you lie back-friendly and relaxed lengthwise. The lying load is 150 kg.

The suspension points must be adjusted to the weight of the person or the weight to be carried and provide a secure attachment.

Regularly check that the suspension ropes and knots are correctly positioned. Protect ropes from chafing, especially on edges or sharp corners. If metal rubs against metal during fastening, it is necessary to grease the areas regularly.

It is not a (children's) swing or play equipment. Children should only use the hammock in the presence of adults and should not be left unattended.

Keep the packaging away from babies or small children, as there is a danger of suffocation if it is put over their head.

Do not hang the hammock near open fireplaces, fireplace, barbecue, etc.

Please note that rodents/mice like to nibble on the fabric - so please protect against them.

## Warranty

The CrazyChair hammock is handmade with great care and subjected to multiple inspections. If something is not in order at delivery or if there is a defect in material or workmanship, a repair or replacement will be made within the framework of the legal warranty.

What is used is at the discretion of the manufacturer. No liability is assumed for any consequential damage or failures beyond this.

The warranty is valid for normal use in private use with careful handling (no commercial or public use). Improper handling, environmental influences, colour changes, damage due to external influences are not covered by the warranty claims.

## We are happy to help.

For questions, advice, product information, we are available as manufacturer. If you need our advice on hanging, have any questions regarding the use of the product, accessories or other items of the Crazy Chair Collection, please contact us by phone or e-mail.

Crazy Chair is an internationally registered trademark. Crazy Chair develops, designs and produces in Germany. More about Crazy Chair can be found on the Internet at [www.crazychair.de](http://www.crazychair.de)

## Hammock Stands

For the COMBO, there are the perfectly matching stainless steel stands LAZY and BUDDY.
