Scope of delivery

please check for completeness.

A 2 bent, angled stainless steel tubes

B 2 straight stainless steel tubes

C 1 weatherproof mat of micro-grid fabric

Hint:

Weatherproof neck pillows are not included in the basic scope of delivery, but can be ordered.

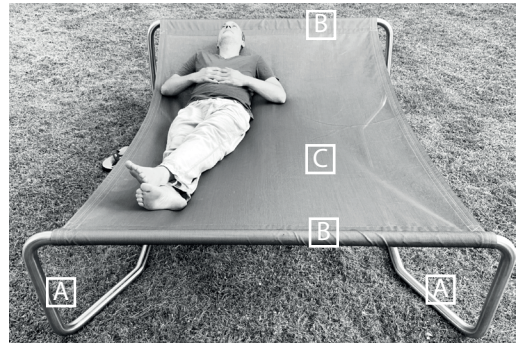

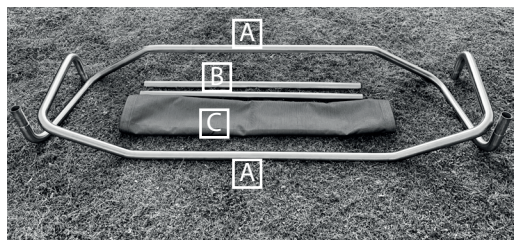

DIVAN

This is what the fully assembled DIVAN looks like.

The good news first:

You don't need any tools for the assembly, because all pipes are inserted into each other with a perfect fit.

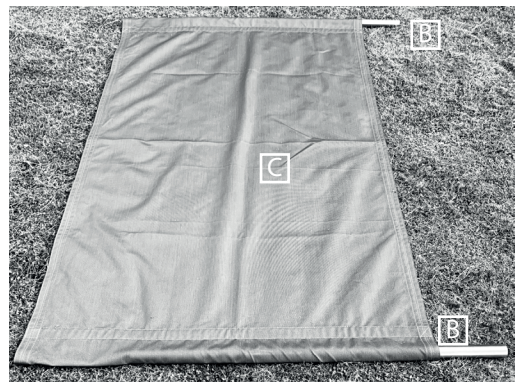

Two people are required for assembly, making everything much easier.

1st step

Place the micro-grid fabric sheet **C** on the floor and push the two straight tubes **B** into the tunnel channels on the short side of the future lying surface.

We would like to point out that the black sewn-on belt straps are already on the underside of the lying surface.

Step 2

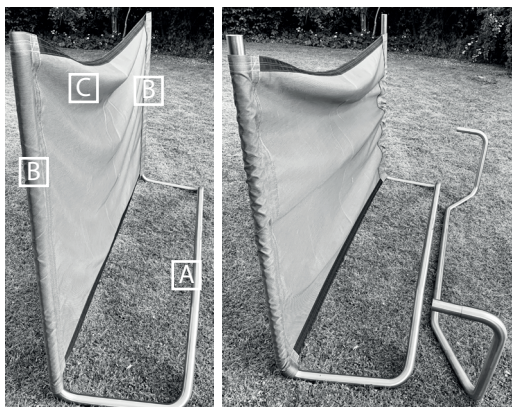

Take a bent tube **A** and lay it next to the mattress **C** with the two tube ends **B** as shown in the illustration.

Step 3

Insert the two tubes **B** into the tube sockets **A** of the first base frame as shown in the illustration. Note that the sewn-on straps must be on the underside of the lying surface **C**. The tubes are made to fit exactly and must be pushed together slowly with a little feeling by both persons at the same time.

Please note that the ends of the tubes are not pushed onto a hard floor during assembly and run the risk of slight deformation at the edge. This makes it more difficult to join the pipes together.

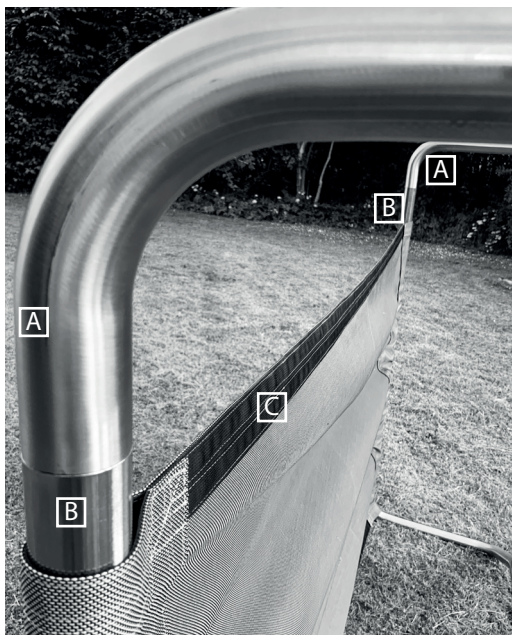

Step 4

Repeat the process of fitting the 2. bent pipe element into each other. Each person grips one end of tube **A** and then both persons simultaneously push it onto the tubes **B**, which protrude from the tunnel channel of lying surface **C**.

Make sure again that the bent tubes are correctly attached and that the underside of the lying surface shows the belt strap.

If the tubes „hook“ into each other, this is because the tubes are not inserted slowly and simultaneously by both persons. The fitting accuracy was deliberately made so exact, so that the best, perfect lying feeling is created later during use.

Step 5

All pipes are now firmly inserted into each other. The couch can now be placed on floor tubes **A**. Now align the couch with both cross tubes of the tunnel channel towards the middle. The Crazy Chair DIVAN is now ready for use.

DIVAN no longer needs to be dismantled and can stay outside.

Of course it can get dirty. Therefore we recommend to wipe the mat regularly with a wet micro-fibre cloth. In this way bird droppings, etc. can also be easily removed.

Also clean the stainless steel pipes occasionally and treat them with a creamy/liquid stainless steel care.

Resting load approx. 300 kg or 3 adults.

DIVAN is weatherproof, even when used in sun/UV, sea water, rain, snow.

Care of the stainless steel pipes

Recommended:

Stainless steel is the modern material of our time, hard-wearing, robust and easy to clean. Clean stainless steel pipes only with a non-abrasive cleaning agent. Often a strong rubbing with a soft, clean cloth is sufficient. Water with dishwashing detergent removes almost any dirt. For intensive care we recommend „Stainless Steel Polish“ from Starbrite.

Unsuitable:

Do not use abrasive substances as they will scratch the surface. Chrome, silver and brass care products are not suitable, as they dissolve oxides. Furniture polishes and other „shiners“ are also unsuitable as they form a wax film. Metal sponges or iron wool (often black metal) are not suitable, as they scratch the surface and leave rusting iron particles.

Cleaning the lying surface

Recommended:

The weatherproof micro mesh fabric is robust and easy to clean. Dirt is simply wiped off with a micro-fibre cloth, whether it is ice cream, chocolate, wine, beer, juices or bird droppings. Small residues in the mesh fabric can be treated with a soft to medium-hard brush (nail brush). After a rain shower, tap the lying surface with the flat of your hand so that the drops fall out and you can use DIVAN again.

Unsuitable:

Never use a high-pressure cleaner or a steam jet for cleaning, as these can damage the filament of the fabric. Strong cleaning agents are also unsuitable and are not necessary. In general, all sharp, coarse and aggressive cleaning agents and methods are unsuitable and also not necessary. The material is of such high quality that simple procedures give the best results.

Use, tips and safety instructions

Read the manual before use and keep it for further questions. For safety reasons, set up the stand with 2 adults. The stand must be set up at ground level, on a solid floor that does not give way. Regularly check the technical parts. Weight load DIVAN 300kg. If the stainless steel tubes of the DIVAN stand on stone floors, we recommend sticking foam rubber strips under the tubes. This prevents

unpleasant crunching noises, and compensates for minimal unevenness in the floor. The stainless steel stand with lying surface is not a trampoline. Incorrect use or sharp objects (metal belts, shoe fittings, etc.) can damage the mat. These are excluded from the guarantee due to incorrect use. Babies / infants should only use the DIVAN in the presence of adults and should not be left unattended.

Warranty

The CrazyChair DIVAN is handmade in Germany with the greatest care and is subject to multiple inspections. If something is not in order at the time of delivery or if there is a defect in material or workmanship, a corresponding repair or replacement will be carried out within the scope of the legal warranty. What is used is at the discretion of the manufacturer for each process. No liability is assumed for any consequential damage or failure beyond this. The warranty is valid for normal use in private use with careful handling (no commercial or public use). Improper handling, environmental influences and colour changes or damage due to external influences are not covered by the warranty claims.

We are happy to help you.

For questions, advice, product information, we are available as manufacturer.
