GA20210506-E-LUNO

## Scope of delivery

please check for completeness

A1+A2

2 bent stainless steel elbows with support tube

B1+B2 2 stainless steel T-shaped feet

C 4 cap nut screws, for 13 mm spanner

D 2 screws + 2 nuts, for 13 mm spanner

E 13 er wrench

F 6 Cover caps (mounted on tube ends)

G Stickers with line markings on 4 pipe ends

## Important (concerns step 2 of the assembly):

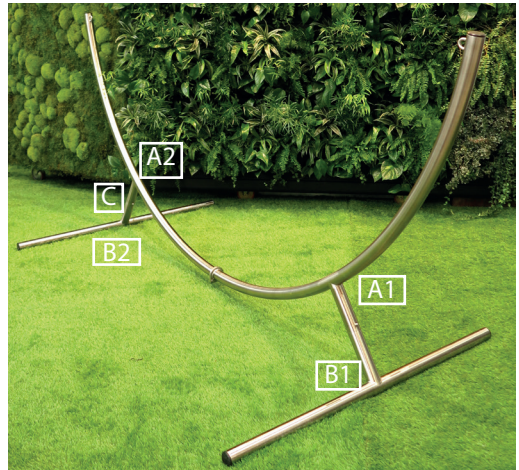

Make sure that the line markings (**G**) match so that the cap nut screws (**C**) can be screwed perfectly into the threads. Observe the stickers on the tubes **A1+B1** and **A2+B2** for the footrests. The 4 cap nut screws (**C**) can only be screwed in when the lines match (**1 : 1 line and 2 : 2 lines**).

## LUNO stainless steel stand

First of all for orientation: This is what the fully assembled LUNO looks like. By the way: The LUNO stainless steel stand can be assembled by one person alone. You should only be able to handle the 13 mm wrench.

### 1st step

Place a half arch (A1) upright so that it stands on the ground with both ends like a „bridge“. The easiest way to do this is to take the half arch between your legs to have your hands free for the next steps.

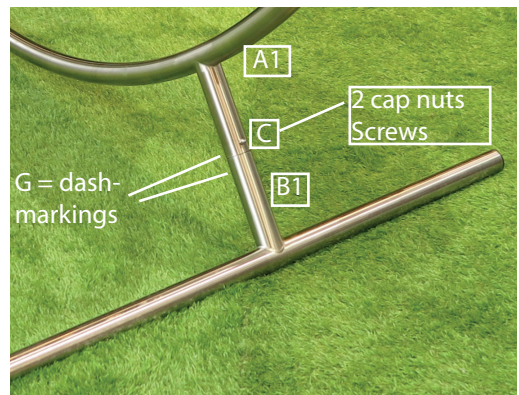

### Step 2 / Important:

On the pipe ends (**A1+B1**) there is a sticker (**G**) with line markings (**1 line + 2 lines**). These tube parts must be inserted into the support tubes of the stand to match the line markings (**G**) (**1 : 1 line and 2 : 2 lines**). If necessary, rotate the tubes so that the strokes match perfectly. Insert both cap nut screws (**C**) in holes and tighten with a 13 mm spanner.

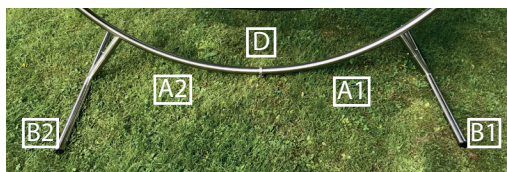

### Step 3

Repeat steps 1+2, observing the line markings (**G**), with half arch (**A2**) and foot part (**B2**) and both cap nut screws (**C**).

#### Step 4

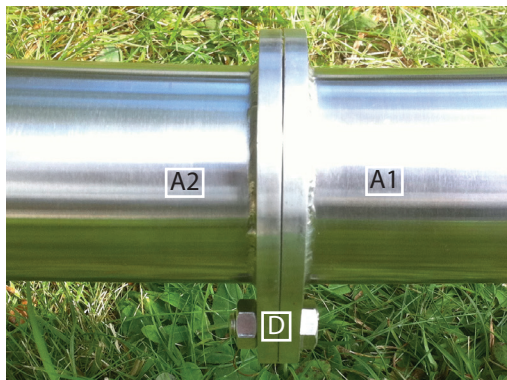

Now the two half arches (**A**) are brought together in the middle (**D**) and screwed together. To do this, place the two bent stainless steel tubes on the screwed-on foot sections (**B**).

#### Step 5

Now push the two half arches (**A**) together so that the two plates with the 2 drill holes fit exactly together. Insert the two 13 mm screws (**D**) through the holes in the two plates and screw on the nuts (**D**). Now tighten both half arches very tightly with the 13 mm spanner (**F**).

Ready, you can now clamp the hammocks into the LUNO stand.

### Stainless steel care

#### Recommended:

Stainless steel is the modern material of our time, hard-wearing, robust and easy to clean. Clean stainless steel pipes only with a non-abrasive cleaning agent. Often a strong rubbing with a soft, clean cloth is sufficient. Water with dishwashing detergent removes almost any dirt. For intensive care we recommend „Stainless Steel Polish“ from Starbrite.

#### Unsuitable:

Do not use abrasive substances as they will scratch the surface. Chrome, silver and brass care products are not suitable, as they dissolve oxides. Furniture polishes and other „shiners“ are also unsuitable as they form a wax film. Metal sponges or iron wool (often black metal) are not suitable, as they scratch the surface and leave rusting iron particles.

### Use and Safety Instructions

Read the manual before use and keep it for further questions. For safety reasons, set up the stand with 2 adults. The stand must be set up at ground level, on a solid floor that does not give way. Regularly check the technical parts. Weight load LUNO 150kg.

The hammock stand is not a rocking stand. Strong rocking is transferred to the stand attachments and can cause damage. These are excluded from the warranty because of incorrect use. Children should only use the hammock in the presence of adults and should not be left unattended.

## LUNO hammock combinations

CrazyChair offers two perfect hammocks for this stainless steel stand.

### **SLIMLINE hammock:**

The SLIMLINE convinces by its extraordinary form, with curved and sewn-in stainless steel brackets. This not only allows you to lie relaxed in it, but also to sit comfortably half-upright. Especially in the sitting position you can feel how your back is relieved and the arms laid down on the edge of the hammock relax your shoulders. It is the perfect reading position for many hours of enjoyment. SLIMLINE is for 1 person, up to 150 kg., TÜV approved.

### **CLIPPER hammock:**

The CLIPPER is a bar-less hammock with decisive advantages over conventional hammocks of this type: The back does not sag, it does not fold over the person lying in it, you can lie straight, it is extremely durable, weatherproof and easy to use. These and other special features have led to the fact that it has the EU and US patent.

CLIPPER is for 1 person, up to 150 kg., TÜV-tested.

### **We are happy to help.**

For questions, advice, product information, we are available as manufacturer. If you need our advice on hanging, have any questions regarding the use of the product, accessories or other items of the Crazy Chair Collection, please contact us.
