

AIRBRUSH MAKEUP TIPS

When starting out, practice with water first to get a feel for the different settings of the compressor and airbrush gun, or use practice makeup>When mixing makeup for your gun, the consistency should be similar to that of milk.

>Prepare the skin with a good cleanser to ensure there are no dead skin cells.

>Wash and pat dry, if you use a moisturizer, give it enough time to soak into the skin before applying your foundation. Our formula already has moisturizers build in & works best without applying moisturizer.

>Make sure your skin is rinsed free from cleanser and totally dry before applying foundation (otherwise any cleanser left over will emulsify the makeup).

>Always test spray on your hand or a piece of white paper before applying airbrush makeup to your face to ensure the machine is working correctly and you have the right color tones.

>It's important to have constant motion when applying airbrush foundation to avoid uneven or blotchy areas (unless you require more coverage)

>Keep your wrist steady when you hold the airbrush gun. Do not flex the wrist.

>Use the air coming from the compressor as a guide. Wherever you feel the air on your face is where the makeup will be applied.

>Clip or tie your hair back to make sure you don't spray any makeup on it.

>Keep moving! Don't stay in one spot or you will have more color in that area and too much color & it will not dry in seconds. Always use the same speed and circular motion for foundation.

>The closer you go, the more concentrated the color will be

>Avoid over-spray, especially when applying foundation as a concealer. This will result in 'hot spots' where makeup is thicker and does not dry as fast as the rest of the makeup. When isolating blemishes, use short bursts of spray and release the trigger before pulling away.

>Don't close your eyes too tight when going over your face this will make every wrinkle you have stand out keep your skin as loose as possible

- >Make sure you blend in your neck with the rest of the foundation to avoid a massive contrast in your foundation application.
- >Some makeup artists like to cover up any spots with a sponge after applying the makeup as a final touchup or before Airbrush application.
- >Don't use regular foundation in the airbrush! Only use airbrush makeup foundation. It is a special formulated formula.
- >When contouring, always ensure to do an even number of passes on both sides
- >When highlighting it is always best to start from the inside and move outwards, pulling back as you go
- >Clean, clean, clean! It is essential to keep your airbrush gun clean and sanitized so it continues to work properly without clogging.
- >Be very careful when handling the tip of the airbrush gun. The needle is very fragile and will not work if you bend it.
- >If you use a concealer, always apply it first! If you conceal over the top of the airbrush foundation you will ruin the airbrushed areas.
- >Shake the makeup gently before using it >4-6 drops of makeup is enough for foundation
- >When applying foundation hold the gun 6-12" away from the face (getting in closer for target areas which require more coverage)
- >A PSI between 13-18 is best lower than that for fine detail.
- >Trust your eyes. If it looks good it's done! The more you observe the changes and learn to watch as you apply the makeup, the better your eye will become.
- >The light bronze colors are much more forgiving than other tones. For beginners it can help to start with these—especially when applying eye shadow—until you build up your confidence and can try more adventurous colors.
- >The bigger the needle, the wider the coverage. Conversely, the smaller needles are good for fine work such as mascara and brows.

>Don't go overboard! If you make too many passes the result will be a 'cakey'
The secret is 'Less is more'!

>Practice makes perfect! Don't be discouraged if you don't get it right away. It takes some time to pick up the techniques to airbrush well but keep watching the videos and reading how-to guides and keep practicing. You'll be getting great results in no time!

>Always ensure your airbrush gun is dry and free from water (or anything else) before you put the makeup in. Any additional liquids will compromise the long lasting quality of airbrush makeup.

>When cleaning your airbrush gun with water, always use distilled water which is free from harmful minerals that may build up in your gun over time and causes blockage.

>When your needle get stuck inside your gun, remove it & give it a quick wipe with some hobby oil (Q20)

Applying Airbrush Makeup Like the Stars

The bottom line is that if you're looking to put on your makeup using a brush, you are settling for a second rate appearance. You do not need to do that anymore. You'll be able to get a individual airbrush make up kit for a really reasonable amount. Once you begin making use of airbrush make up you will be surprised with the results. You will wonder how you ever went out in public without airbrush make up. Just review a couple of pictures of Taylor Swift without makeup to a picture of Taylor Swift Makeup and you will see what I mean.

Here's the very best part. When you first start off making use of your airbrush make up, it's going to be such a vast improvement above your previous makeup that your good friends are going to be so green with envy. They'll notice the difference right away. You're also going to attract so much interest from guys that you won't believe it. You know how you feel whenever you get a makeover or purchase some great clothes? Remember how you have so much confidence and you just know you look great?
