

Smart Tools

\$300.00

Set of Tools Includes:

- 1 x Industrial Removal Tool
- 1 x Sheared post attachment
- 1 x Foot tool
- 1 x Installation tool

Removal Tool Options:

- Industrial Removal Tool (including sheared post attachment)
- Simple Foot Tool

To install ground sockets you require an installation tool. To remove items you require a removal tool. Foot tools can only be used to remove Impact Recovery system / Impact Absorbing system & modified items.

Installation Tool

The installation tool MUST BE USED to ensure Smart sockets are not distorted or pushed out of alignment during installation and will provide over 200 kg of resistance to unauthorized removal of an item. The tool is inserted into the socket, and the socket is lowered into the hole. Alignment is checked and concrete poured around the socket to secure. When concrete cures, place foot on lip of the socket and "twist and lift" the tool to remove.

Removal Tool- industrial

The industrial Removal tool is required to remove posts (they cannot be removed with a post puller- this will pull the entire foundation from the ground).

To remove 60OD bollards and posts you simply hook the base of the tool around the post. The handle will rise as you do this-

- Simply move handle down with jerking action, to remove post.
 - To remove flattened posts use tool to lever post up enough to insert removal tool and remove posts as usual/ some people prefer the foot tool for grab-rails & posts that have been flattened.
 - An attachment is included to remove sheared off posts.
- Works every time- guaranteed!*

Simple Foot Tool

Simple foot tool is used to remove modified posts (with pin or bolt inserted near base to enable removal with foot tool) including umbrella supports, modified bollards and the internal pipe that secures bollards on the Impact Absorbing and Impact Recovery Systems/ and can be used to remove flattened posts or bollards. The foot tool is used to lever the post from the ground. The bolt/ pin is hidden from view once item is installed.

Magnetic Wand Tool

used to remove stainless steel caps from ground cover- refer to ground cover for details.
