

Aircon Units (DCO4a)

www.multiverregamingterrain.com

Read the instructions carefully before putting the kit together. The model can be glued with PVA glue. A file and a sharp hobby knife may be needed to remove the bits of the sprue from the parts

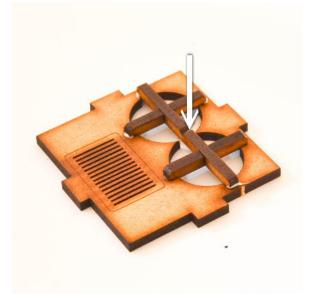

Glue the two shorter vent braces into the holes on top of the piece.

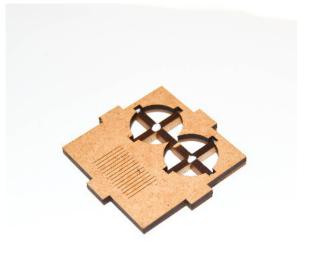

2

Add the longer vent on top of the two shorter ones.

3

Turn the piece over and put a dab of PVA glue in the middle of both vent braces, as shown.

Glue both fans to the vent braces.

One of the side walls comes with two options: the wall with holes will allow you to connect our Aircon Ducts set (DC04) to the Aircon Unit.

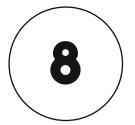

Glue the four walls to the base of the module.

(7)

Glue the piece with vents on top of the module.

Add the rear wall to the generator.

Add the generator hull to the model as shown. Add the fenders over the wheels (not shown on the picture).

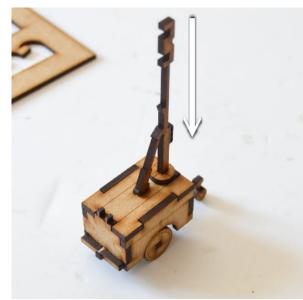

Add the small ring to the end of the pole.

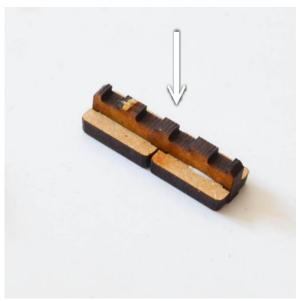

Glue the pole into the holes on top of the generator.

Glue the brace to the back of each pair of lights.

13

Add the four angled pieces to the back of each set of lights.

Glue both sets of lights to the telescopic pole.
