

## Shipping Containers (MTOI)

www.multiverregamingterrain.com

Read the instructions carefully before putting the kit together. The model can be glued with PVA glue. A file and a sharp hobby knife may be needed to remove the bits of the sprue from the parts

Lay the floor of the container flat on the tabletop, as shown.

Notice the small protrusions on the right - this is where the bolts will go.

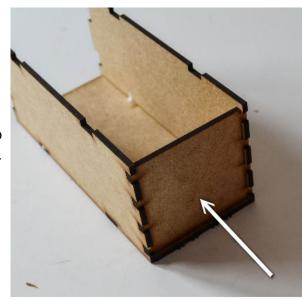

Glue the side walls to the floor. The ends with five smaller joints should be on the same side as protrusions used to hold the bolts in place.

Add the front wall to the model.

## Upper Walls

Add the rear wall to the container.

Add the roof to the container, once again making sure the small protrusions matching the ones in the floor are on the correct side.

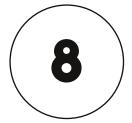

Glue the matte board wall pieces on both sides of the container.

7

Glue the roof detailing piece on top of the container.

Add the matte board door piece to the model.

Add the rear matte board to the container.

Carefully remove the bolts from the sheet with a hobby knife and glue them in place, using the protrusions in the floor and the roof as a guide.
