

Portable light Towers (DC18a)

www.multiversegamingterrain.com

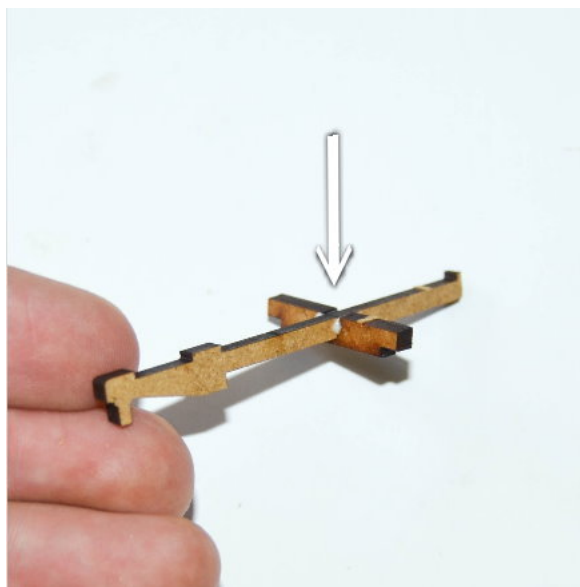

Read the instructions carefully before putting the kit together. The model can be glued with PVA glue. A file and a sharp hobby knife may be needed to remove the bits of the sprue from the parts

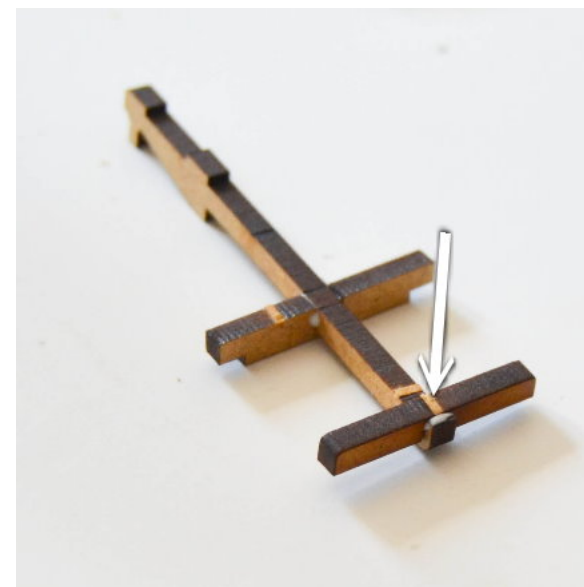

Start with these two pieces.

Glue them together in the middle as shown.

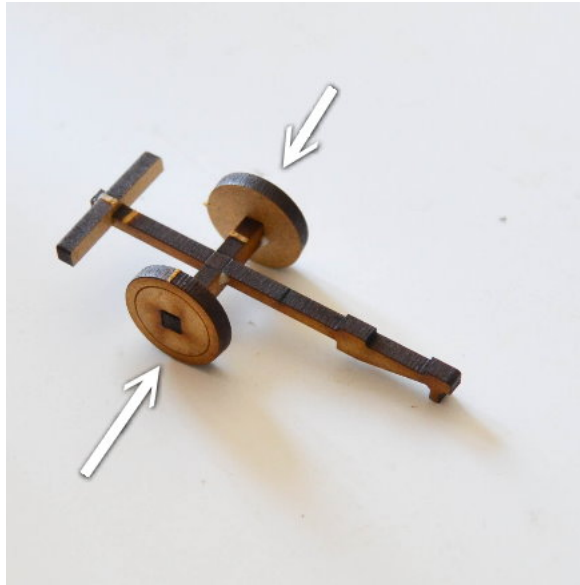

Add the rear bumper to the

4

Glue the wheels to the axle in the middle.

5

Prepare the two smaller wheels.

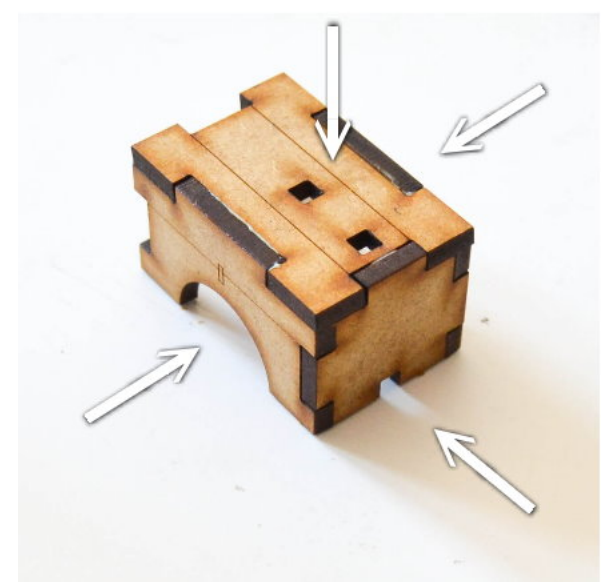

6

Glue them together (with engraving facing outwards) and then to the model as shown.

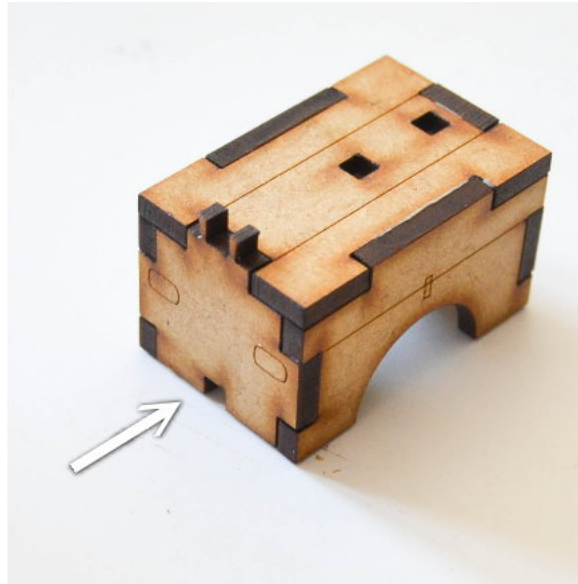

7

Glue the side walls, the top of the electric box and the front side together. Please note where the holes in the top of the box are.

8

Add the rear wall to the generator.

9

Add the generator hull to the model as shown. Add the fenders over the wheels (not shown on the picture).

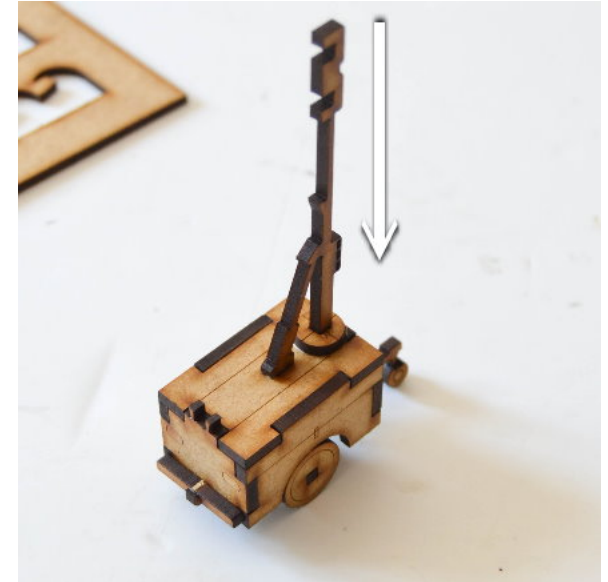

10

Add the small ring to the end of the pole.

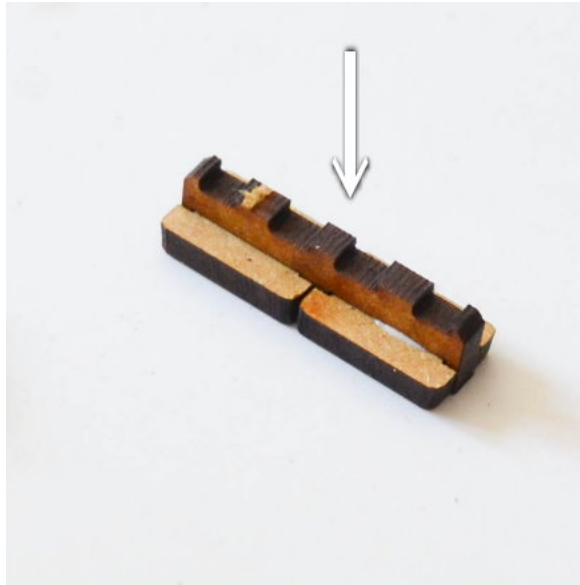

11

Glue the pole into the holes on top of the generator.

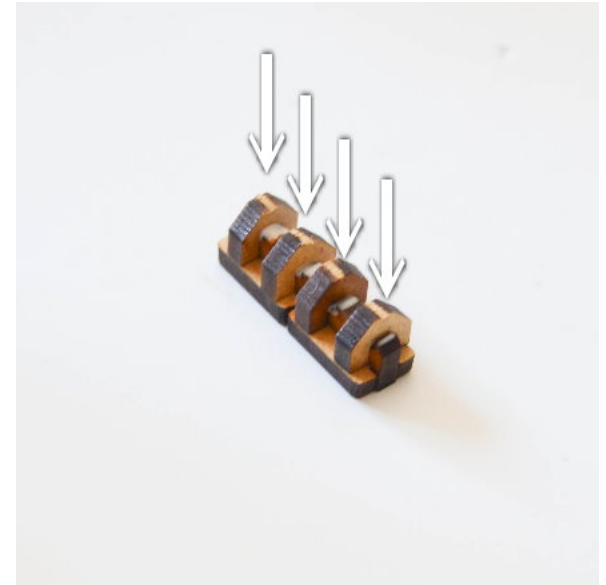

12

Glue the brace to the back of each pair of lights.

13

Add the four angled pieces to the back of each set of lights.

14

Glue both sets of lights to the telescopic pole.
