

## Moisture Vaporators (GWTOOI)

[www.multiversegamingterrain.com](http://www.multiversegamingterrain.com)

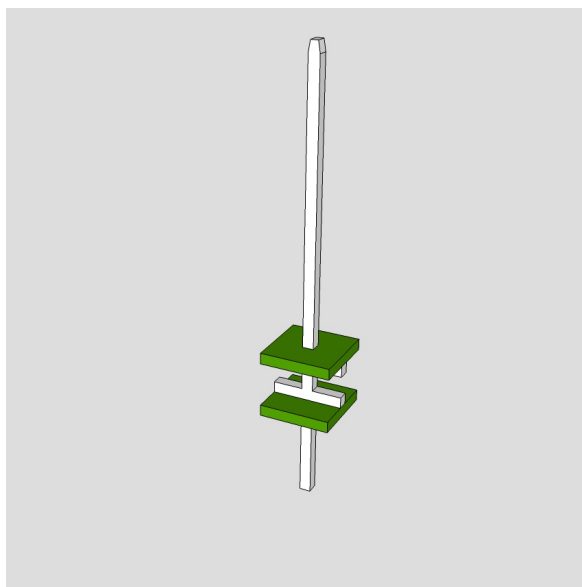

Read the instructions carefully before putting the kit together. The model can be glued with PVA glue. A file and a sharp hobby knife may be needed to remove the bits of the sprue from the parts

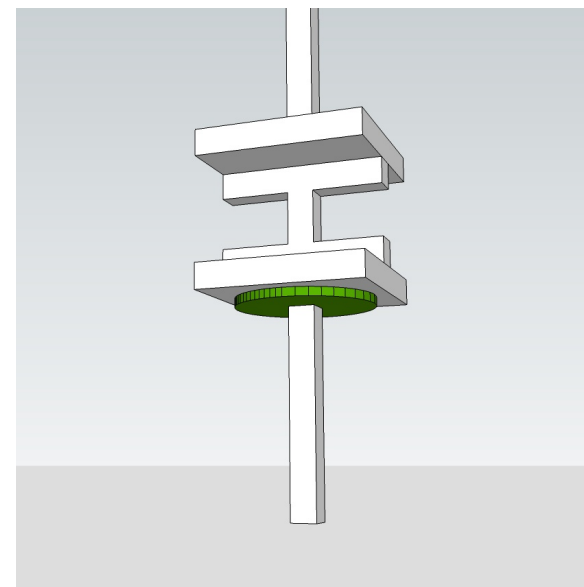

Start by preparing this piece:

Slide the two square pieces from the two ends of this piece and glue them in place.

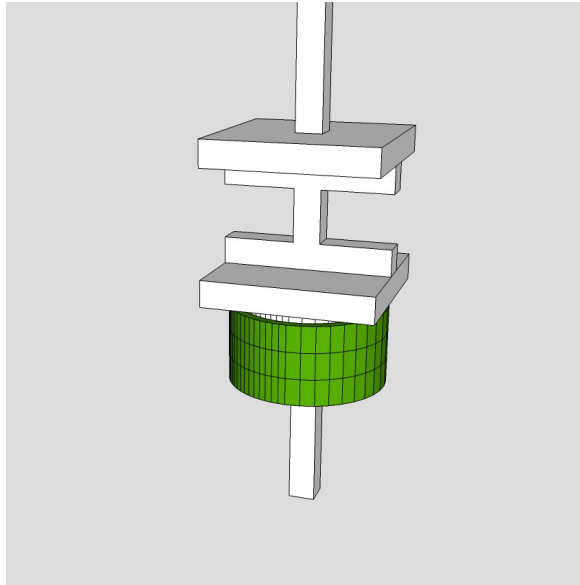

Add the first greyboard circle (part G). Subsequent steps involving circle parts will have only the material (HDF/greyboard) and letter given.

# Main Body

**30**

J (HDF)

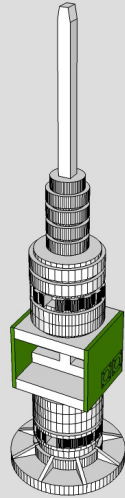

# Main Body

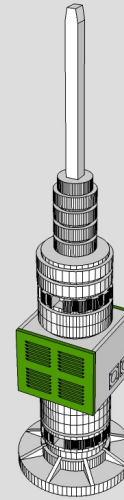

**31**

Glue the two smaller greyboard walls (the ones with plugs rather than grills) to the side of the HDF squares as shown.

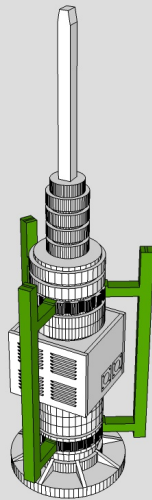

**32**

Glue the walls with grills so that they overlap the plug walls as shown.

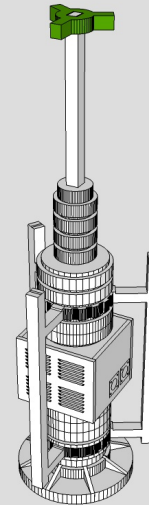

**33**

Glue the three side pieces to the model as shown.

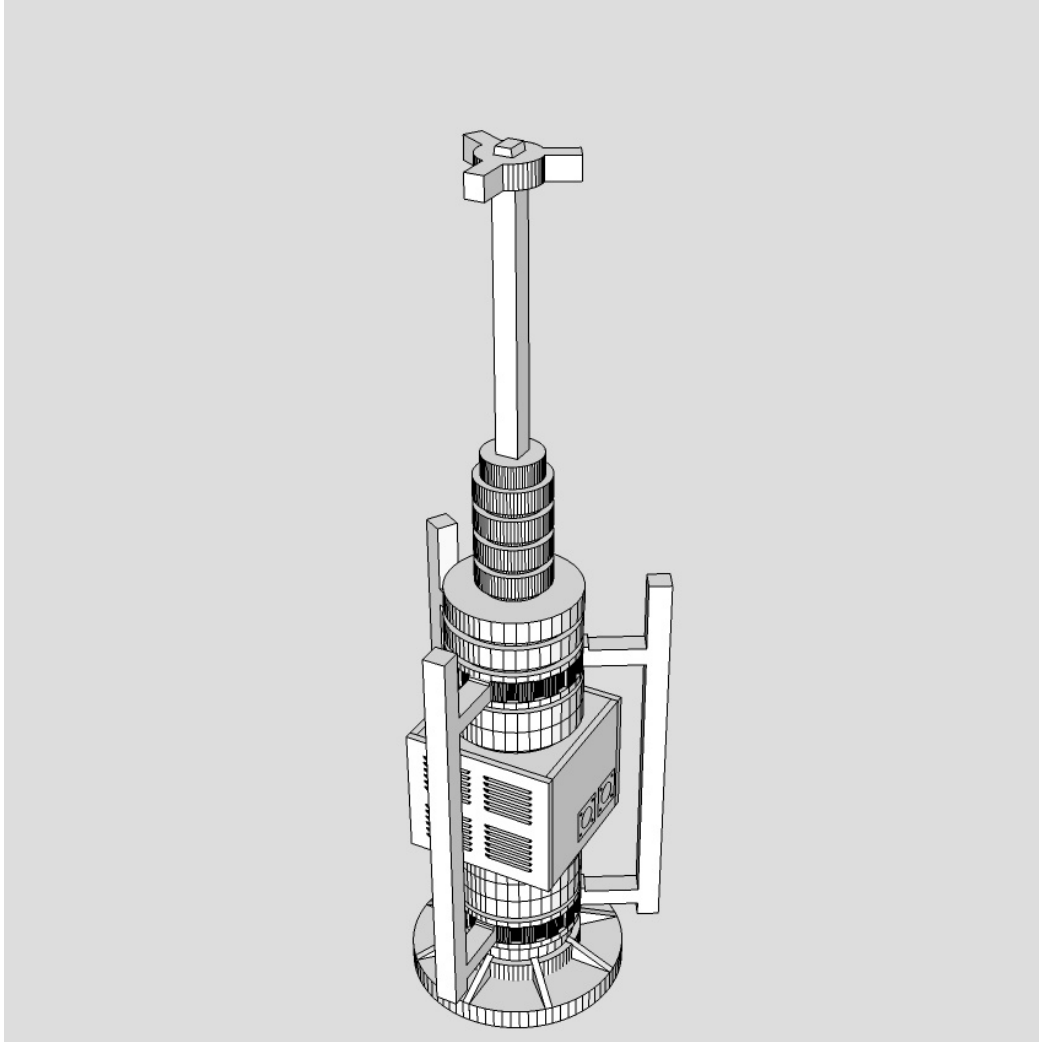

**34**

Glue the top piece to the model as shown.

# Main Body

It's finished!
