Graveyard Fence
## (KG005)

Read the instructions carefully before putting the kit together. The model can be glued with PVA glue. A file and a sharp hobby knife may be needed to remove the bits of the sprue from the parts
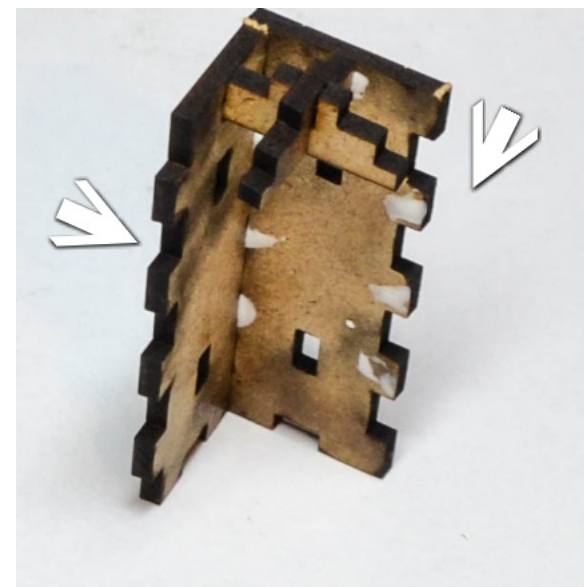

1

Prepare these two pieces.

2

Assemble them as shown.

3

Glue the first two side walls to the cross as shown.

Pillars

4

Glue the two remaining pillars to the piece.

5

Add this piece on top of the pillar.

6

Gate pillars: follow the steps 1-5, but use this piece instead of the one of the regular ones in step 4.

7

Glue these two small pieces to the indentations at the edge of the gate piece.

Pillar w/hinged gate / Gate Portal

8

Glue the four hinges to the gate pillar, wait for the glue to dry, and then thread a ~1mm wire through all the holes as shown.

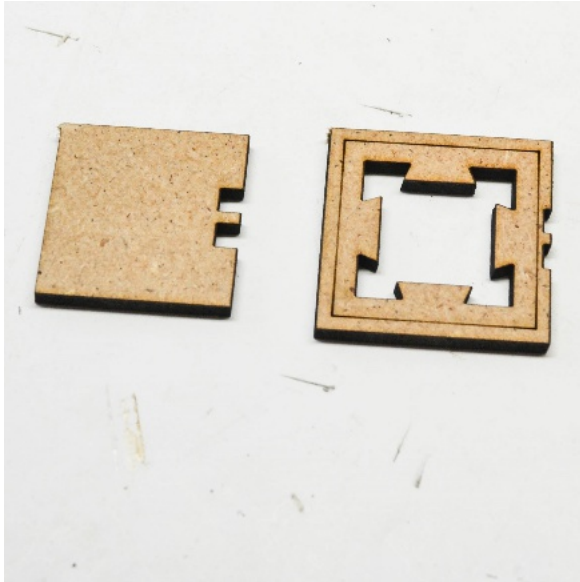

9

Cut away the excess wire and add a tiny drop of superglue at the end of each hinge to keep the wires in place.

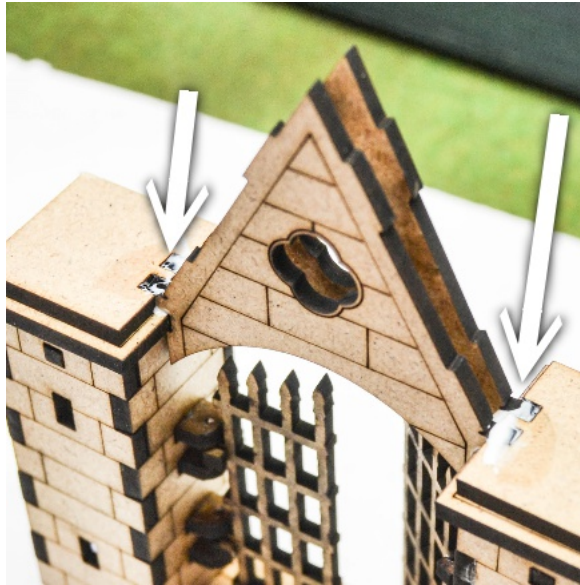

10

Prepare both pairs of these pieces.

11

Glue them on top of each other as shown.

Gate Portal/Fence Sections

12

Glue the two triangular pieces to the ones you've assembled in steps 10-11. Use the pillars and the 50mm parapet piece for easier assembly.

13

Add this greyboard piece on each side of the gate, followed with the shingle pieces.
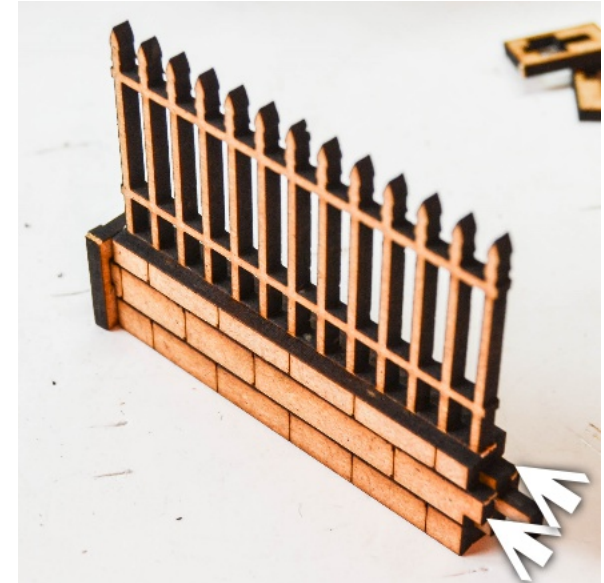

14

Add the small wall cap at the end of each fence module.

15

Add the engraved wall pieces on both sides of each module.

.../Pillar cap B

16

Finish it off with the second wall cap.

17

Use these two pieces for each of the pillar caps, gluing the small rectangle on top of the larger one (use the engraving as a guide).
