

Solarogen™ Tracer Dye

SAFE AND NON-TOXIC • ECONOMICAL TO USE
EASY TO APPLY

Quickly Detect Water Leaks at the Source using Fluorescent Dye

Solaron FL Green Tracer is a safe and non-toxic fluorescent dye which acts as a color label for individual drops of water, visually indicating the path where liquid is flowing.

Solaron Tracer Dye is biodegradable so the color will eventually break down when exposed to sunlight.

Fluorescent dye is the ideal choice for water tracing. Only a few drops are necessary so it's highly cost effective and the dye can be easily and accurately measured on-site with a portable field fluorometer.
