Clearmaxx and E3000X PAPR and COVID-19.

The Clearmaxx in combination with e3000X is certified according to EN12941 as TH3. Therefore, it filters and removes >99.8% of harmful solid and liquid airborne particles to deliver clean, filtered breathing air. This includes infectious viruses transmitted through air as the infectious droplets are filtered.

The filter is rated TH3P R SL: this means it protects against solids and liquids and can be used for multiple sessions.

Compared to the best in class filter mask (FFP3 mask), this increases the safety of the users by a factor of ten, or even by a factor of 40 when using FFP2 masks.

An infection through the eyes can be prevented by the face shield.

Additionally, the user won't accidentally touch their faces while wearing the optrel Clearmaxx.
