

# Galaxy Trucker Inlay

## Notes before assembling

This product does not require glue for assembly, although you may use it if you wish. For this reason, the joints are very tight, and will need a bit of force to get them inserted. Should you have trouble assembling the box inlay, use a craft knife to shave a little off the edges of the tabs (red parts indicated here ) and then use glue to assemble. Very little to no force should be required with this method.

The assembly of this product is very simple; the parts should be put together as per below, and the components fit in their places as pictured. The two halves stack on top of each other, with the tiles above the bits tray to fit in the Galaxy Trucker box.
