

DROP MASTER

TECHNOLOGY

Specifically developed by Mutoh, for select ValueJet models, DropMaster is a revolutionary print automation technique which eliminates the need for cumbersome and time consuming media dependent head adjustments. Knowing the media thickness and consequently the drop-throw distance between print head and media surface, DropMaster is capable of automatically recalculating and adjusting the uni/bi-directional fire timings. It does this regardless of resolution and print speed. Giving you an overall increase of image definition and smoothness and significant time savings.
