

1

Set Print Mode:
Uninet iColor White/
Clear Window Cling

• Page size must match media being used. (Letter, Tabloid, or Banner)

iColor 500/600: Transparency
iColor 550/540: Thick to 220g
iColor 560: Thick2 to 163g
iColor 650: User Type 2
iColor 800: Thick to 220g

2

Glossy Side is Print Side.

Specific print modes are available on the iColor ProRIP software for clear or white window cling.

Letter/A4 sized media should always be fed landscape when using the iColor 600 and 800 models.

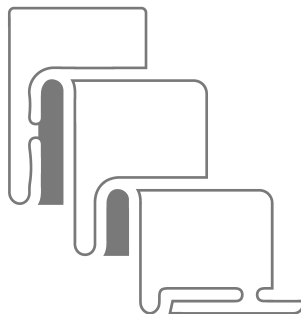

CLEAR

Completely black images do not require white toner.

White Overprint or Underprint Coverage:
200%-300%

WHITE

Print in CMYK or CMY composite black. No white toner is needed.

DO NOT set the job to mirror print

CLEAR (option 1)

DO NOT MIRROR PRINT

Set RIP to print white as an **UNDERPRINT**.

Printing this way will allow you to apply the cling to an inside window and observe from the inside, OR apply to the outside and observe from outside.

CLEAR (option 2)

DO MIRROR PRINT

Set RIP to print white as an **OVERPRINT**.

Printing this way will allow you to apply the cling to an inside window and observe from the outside, OR apply to the outside and observe from inside.

Available in the following sizes:

Clear – Letter, Tabloid and Banner sizes

White – Letter, Tabloid and Banner sizes

Now you can create window cling to affix to metal, glass, plastic and more! IColor Window Cling media is available in a variety of sizes (letter, tabloid and banner) and in both white and clear options. These products were specifically designed to work with all IColor transfer printers, and will also work with many popular laser or LED printers - please check with your printer manufacturer for compatibility.

Avoid Jams:

- **You cannot run the 52" length in the IColor™ 350 / 540 / 550 / 800, use the 49.6" length for these printers.**
- **You cannot run banner length media at all in the IColor™ 560.**
- **IColor™ 540/550 users only – If you are applying this media to a very dark or black substrate and the image is not vivid enough, ask your IColor™ dealer about the glossy specialty toner kit, specifically designed for underprint applications. This special toner will increase the opacity of your print and allow for more white to be printed without washing out the prints.**
