

T.SealTM

Silicone Seal Sheet.

The T.Seal is used for the final seal of OBM4.4, WoW7.8, T.One and T.Foil decorations. T.Seal is a paper carrier with a very thin silicone rubber film on it. The film will seal and mold the image film nicely into the weave of the garment for the best washing and durability. Use with rubbery side towards the decoration and press for 10-20 seconds. **Can also be used with DTG, and DTF.**

Important: Before first use press the sheet with the rubber side down on the lower platen of your heat press. Do not cut the sheets in half or the like because the rubber film will come off! Do not use with any CP Toner because the yellow pigments will migrate into the rubber film! **Also do not use with sublimation inks or sublimation printed garments/products!!!** The T.Seal sheet will pick the sublimation colors and will be lost.

Note: Do not use the T.Seal at temperatures higher than 150°C / 300°F because it will be degraded quickly!
