Looking for a fabric to match your needs? These are fabrics we know well, we work with them everyday in the production of our own products. If you have your own fabric you want us to work with then let us know.

1100d CORDURA

The toughest of the tough! Being exceptionally abrasion resistant with a durable PU coating to repel dirt and water, 1100d Cordura is the ideal fabric for lovers of gnarly trails and people who fall off a lot.

Weighing 380 g per square metre, 1100d Cordura is a bit heavier than our other fabric options but will shrug off the roughest of treatment.

500d CORDURA

Tougher than VX21 and weighing only a little more, 500d Cordura is waterproof and highly abrasion resistant, so we often use it to make hardcore bags without adding much extra weight. The clear PU coating repel dirt and water too, giving your stuff a bit of protection and making it easier to wipe down.

At 240 g per square metre, 500d Cordura is slightly heavier than VX21 but handles wear and tear much better.

VX21

A 4-layer, 210 denier laminated nylon fabric with a DWR finish: VX21 (or X-Pac to its friends) is a high tech, ultra-light sandwich of materials that is highly abrasion and tear resistant, low-stretch, and waterproof.

The ripstop nylon face fabric makes the bag super durable, whilst the diamond pattern dacron makes the fabric stiffer and water resistant. All this comes together to create an all-round fabric that weighs just 230 g per square metre, enabling us to create stable, tough, weatherproof and lightweight packs and luggage.

VX07

Like VX21, VX07 is a 4 layer laminated fabric with a DWR finish. It's also tear resistant, waterproof, and low-stretch, which makes for highly durable, stable, and weatherproof packs and bags.

VX07 uses a 70 denier ripstop nylon face fabric, which makes it extremely lightweight, weighing just 162 g per square metre.

LS07

The lightest waterproof and abrasion resistant fabric we use, ideal for your ultralight long-distance racing or bikepacking set-up. A 70 denier Nylon Ripstop backer makes it super tough for its weight. We make LS07 products without a lining to keep them ultralight.

WAX COTTON

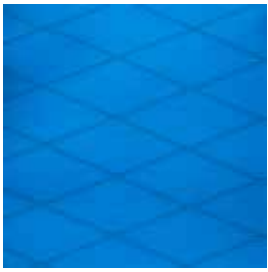

A heavyweight waxed cotton fabric at 375gms.
