Problem-Solving

1. Problem

Student encounters a problem.

2. Identify

First, ask the student to identify what the problem is (even if it's obvious to you!).

3. Options

Together with the student, name as many solution options as possible, good or bad.

4. Choose

Encourage the student to choose one solution and try it.

5. Evaluate

Evaluate whether the solution worked or if there's a need to try a different solution.

6. Conclusion

If the chosen solution solved the problem, the goal is reached. If not, return to step 4.
