## Prof Pinotte Relay Switching System

### HIGH QUALITY STANDARDS

GUP Tech's products are handcrafted and high quality standards are implemented.

### LIMITED WARRANTY

All purchases on GUP Tech's Shopify website are covered against defects for 1 year. Any non-working unit will be repaired or replaced, free of charge.

- GUP Tech's new PPRSS (Prof Pinotte Relay Switching System) brings your true bypass experience to a whole new level!
- A truly compact design that fits inside most of GUP Tech's effects pedals.
- A simple operation which gives you more options than a standard true bypass system.
- An internal memory that remembers whether to bypass the effect or not, right when the pedal is switched on.

You get to decide whether your audio signal passes through your effects pedal or through the true bypass when your pedal is switched on :

To toggle between "Auto-On" and "Auto-Bypass" modes, simply hold the footswitch for a couple of seconds while switching on the pedal. The intelligent relay bypass will remember your choice until you toggle between modes again!

Normal operation of the PPRSS is also very simple : As soon as the footswitch is pressed, the effect is toggled to *on* or *off*.

If the footswitch is held for longer than 0.5 second while the effect is active, then the effect will be bypassed until the footswitch is released.

If the effect is *off* and the footswitch is held for longer than 0.5 second, the effect will be activated momentarily until the footswitch is released.
