

How to add LED template to Simhub

19/05/2019

Taichi Yoshida

Step 1

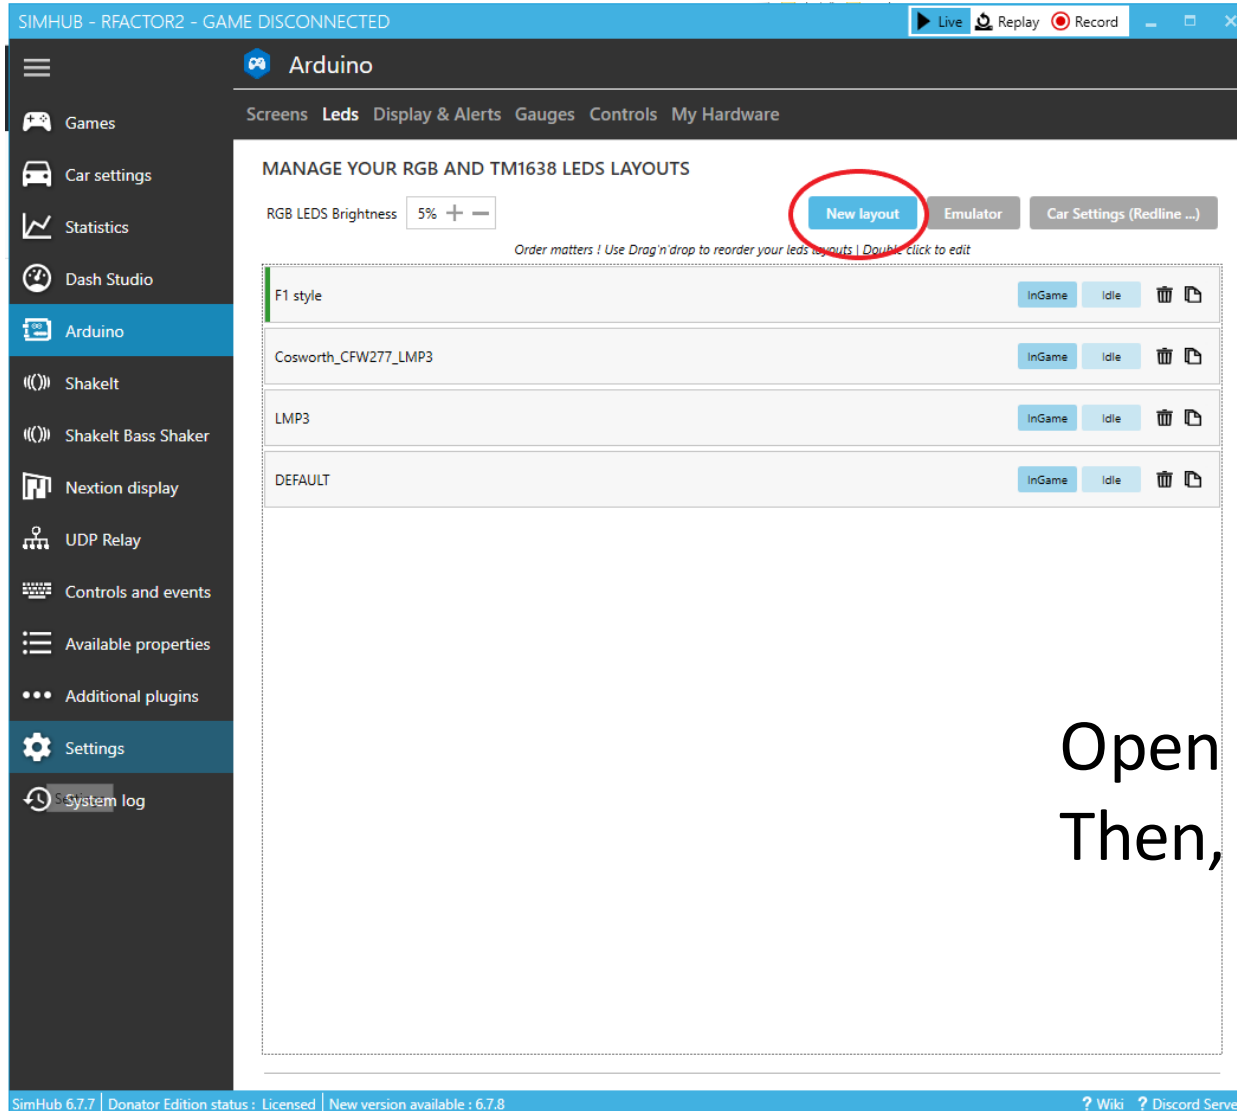

Download .leds file on your pc

LED templates are LEDS File

Step 2

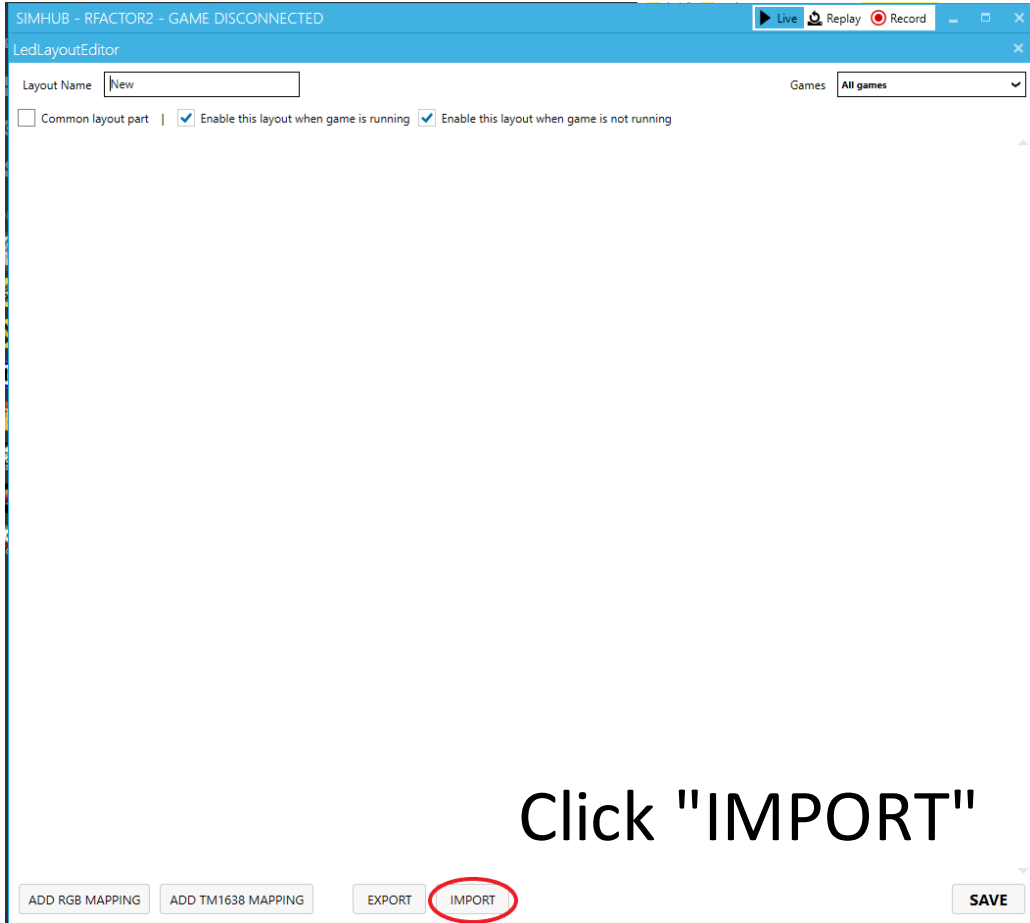

Create New LED layout

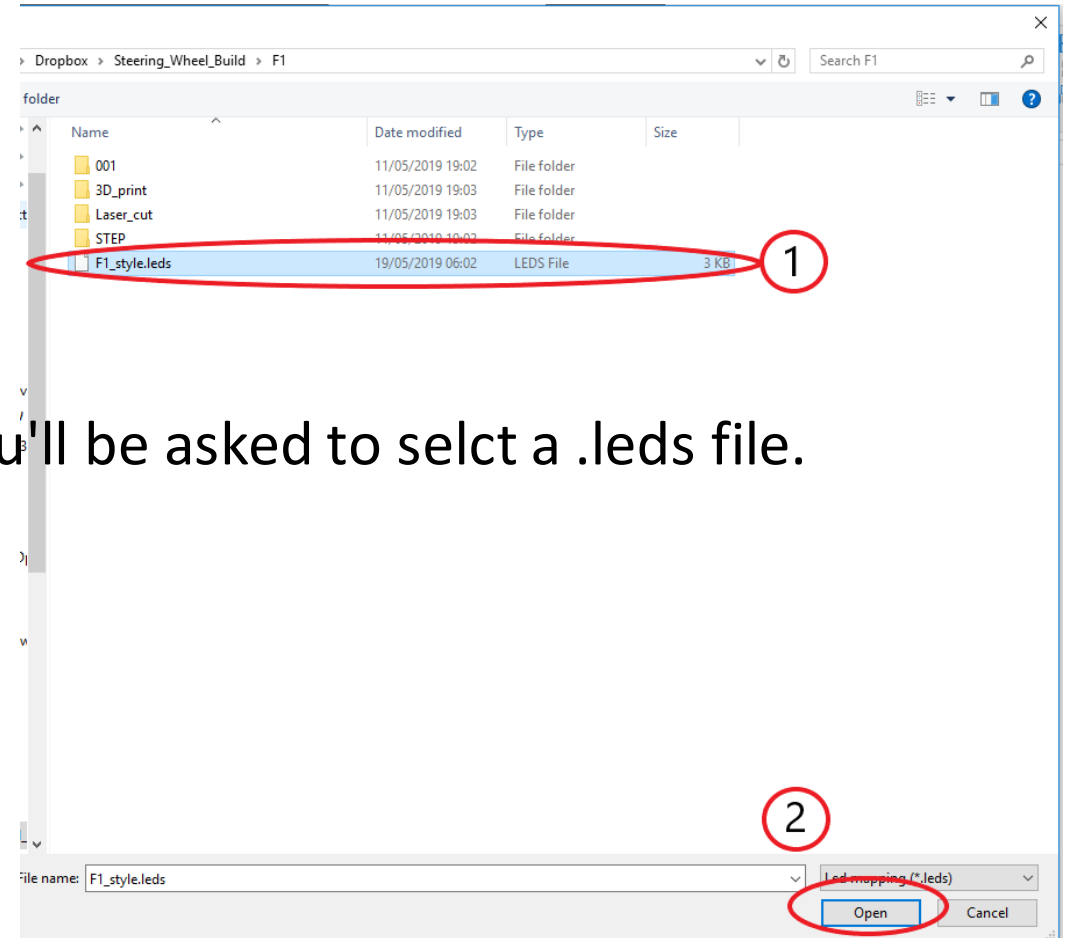

Open Simhub
Then, click on Arduino>Leds>New layout

Step 3

Importing templates

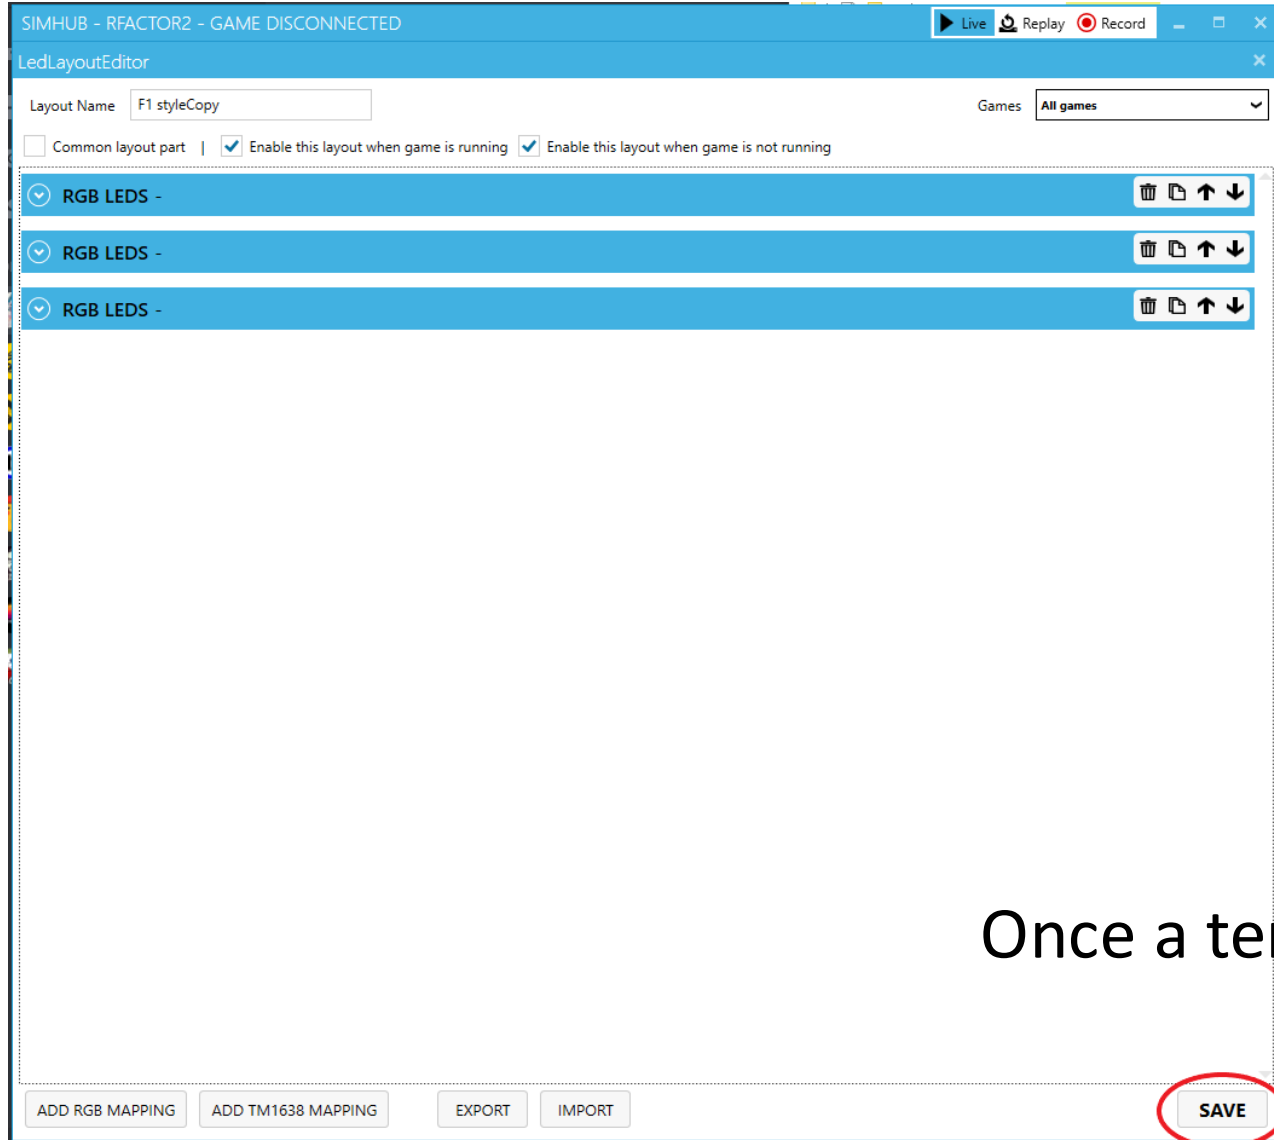

Then you'll be asked to select a .leds file.

Step 4

SAVE the template to exit

Once a template is imported, click "SAVE" to exit.

Step 5

Apply the template

MANAGE YOUR RGB AND TM1638 LEDS LAYOUTS

RGB LEDs Brightness 5% + -

New layout Emulator Car Settings (Redline ...)

Order matters / Use Drag'n'drop to reorder your leds layouts / Double click to edit

F1 style	InGame	Idle	🗑️	📄
Cosworth_CFW277_LMP3	InGame	Idle	🗑️	📄
LMP3	InGame	Idle	🗑️	📄
DEFAULT	InGame	Idle	🗑️	📄
F1 styleCopy	InGame	Idle	🗑️	📄

LEDs' brightness can be adjusted here.
Recommended value is **5%**.
Avoid higher than **30%**

Please make sure the template you want to use is on the **TOP** of the list.

Drag and drop to change the order.

Once that's done, you're good to go!
