

Thanks for purchasing our world class Aimex Water Filter - 8 stage / 7 stage / Fluoride Filter / Algae Shield White Filter

Please find the following guidelines for seamless installation.

1. Soak The Filter Overnight

2. Wash the filter under running water for approximately 10 min or till it stop leaking black natural colour from the Activated Charcoal

3. Make sure it is not leaking the Black Colour anymore.

4. Take of the upper part of the tank - where dome has installed

5. Unscrew the dome and take it out.

6. Now gently hold the lower part of the dome with one hand and the upper part with another hand. Spin anticlockwise with care and open it. Replace the pads with new one.

7. Pad colour doesn't matter , however, we reckon to put white on the top so it will be easy to monitor. Now, put everything together and screw it back to tank.

8. Finally, all ready to go! just pour the water as usual and enjoy the fresh water from the filter.
