

The **Teeter Pouch (TP)** is a versatile solution for carrying your bottle on a PALS-equipped bag. We have found the following attachment method to be the best for carrying 1L bottles. However, the user can adjust mounting to better suit their need.

*Step 1:* Begin by threading the buckles on your TP up under one row of PALS webbing and attach them to the row above, as shown. The fleece side of the TP should be facing up and the Cordura side facing down. Next, begin the lacing of the shock cord by running it up over the legs of the TP and then up through the first row of PALS webbing.

*Step 2:* Take the ends of the shock cord and run them back down through the first set of grommets on the TP.

*Step 3:* Thread the cord ends back through the next row of PALS webbing and then through the next set of grommets on the TP.

*Step 4:* Thread the cord through the third row of PALS webbing and the third set of grommets on the TP. Finish threading the cord through the fourth row of PALS webbing on the bag, thread on the cord lock and tie a knot in the cord ends.
