■ Camera Jib Setup

- Insert central fork of Jib arm into bowl of tripod stand, then attach bottom clamp to it for secure connection.

NOTE: It is important to make sure that the Central Fork is seated in the bowl properly. That means perpendicular to the tripod bowl. Off axis installation may hamper movement of the jib. Also you may need the assistance of a grip stand to hold the camera end of the arm during installation preventing it from falling as it will be front heavy at this point. You may also need the grip stand or assistance at the rear of the jib when mounting the camera.

- Provided are the jib panning control knobs (as shown in the picture). Loosen the knobs for smooth pan movement of jib and tighten these knobs to lock pan movement of jib.

- Now to extend the rear section of jib, loosen the Allen bolts with provided Allen key and then, loosen the knob as shown in the picture.

- Then, loosen the knob provided at lower telescopic section of jib arm as shown in the picture to extend front section of telescopic jib accordingly to the rear section.

NOTE: Make sure the opposite end of the jib arm is secured so that the addition of the weights does not cause the arm to rise violently.

- Attach weight shanks at rear end of jib section by screwing it in and then add weights to it.

- Camera head mount is provided with a knob to control 90° tilt movement of camera. Loosen knob for free tilt movement of camera and tighten it to lock movement.

- Mount your fluid head onto the bowl plate in order to attach the camera. And then finally, secure your camera properly on the fluid Head.

**YOUR PROAIM 7'WAVE-2 VIDEO JIB CRANE
ALL DRESSED UP AND READY TO GO!**

(SHOWN WITH OPTIONAL ACCESSORIES)

Warranty: We offer one year warranty for our products from date of purchase. Within this period of time, we will repair it without charge for labor or parts.
