Portable Dolly

12V Joystick Controller
With 7.5mm Wire

Weight shank

Bottom
Clamp

Zoom Controller
With 9mm Wire

Sr Pan Tilt Head

Storage Bag

■ Assembling

You can use the telescopic jib in 2 ways

- In case of spreader, Open Tripod spreader. In order to extend legs of spreader, loosen the knob and extend it as per your requirement and retighten the knob to secure.

- Open the legs of 100mm tripod stand then attach it to spreader, lock it in place with the rubber grips.

- In case of Dolly, Take out the bolt from the center of dolly and spread it on floor. Then put the bolt back through the center of dolly again.

- Now mount the Tripod Stand on Dolly, lock it in place with the rubber grips.

- Adjust riser height of Tripod by loosening lock controls located on each leg, slide the stand up to a desired level position and lock leg extensions in place to secure.

- Now attach the central fork with the tripod bowl, then attach bottom clamp to secure it well.

NOTE: It is important to make sure that the Central Fork is seated in the bowl properly. That means perpendicular to the tripod bowl. Off axis installation may hamper movement of the jib. Also you may need the assistance of a grip stand to hold the camera end of the arm during installation preventing it from falling as it will be front heavy at this point. You may also need the grip stand or assistance at the rear of the jib when mounting the camera.

- Unscrew the knob to extend jib arm at back and retighten the knob. Secure all the connections.

- Insert the weight bar into the jib arm.

- Now slide in weight to it as per your requirement and screw in weight closer properly. (Counter weight NOT INCLUDED)

- Loosen the knobs of Jib arm to extend the front telescopic post of the Jib.

- Extend the Jib as per your requirement and tighten all the knobs to secure.
