Bag Packing

■ Megagrip Car Mount Setup

To guarantee proper adhesion of suction cups, check that the surfaces of both, suction cup and mounting surface are clean, dry & dust-free.

NOTE: Please mount the device on smooth, even and non-porous surfaces.

- Remove the complimentary dust cover and place your first suction cup on selected position from where you want to shoot. Press down suction cup and keep pushing pump to firmly fix it on surface. Repeat this process for all suction cups.

- Attach the Adjustable Rod Clamp with suction cup and tighten knob to secure the clamp.

- Insert rod of any desired length into rod clamp and tighten it with the knob. Then by repeating the previous step, attach rod clamp to other end of rod and fix it by the knob.

- Attach ball levelling camera plate with rod clamp and secure it carefully by tightening the knob. Repeat same process for rest of clamps.

- Although the Megagrip's holding force is adequate for regular driving shots, safety belts/tension straps must be used for additional security. When mounted on cars, the objects attached to Megagrip (e.g. camera) have to be secured additionally.

■ Things To Remember

- Use the rubber sleeves to avoid dents and scratches on car paint. Tighten tension straps carefully to avoid damages.

- The length of Rods can be extended as per your setup requirements with help of rod jointer/connector, to achieve different configurations.

- You can easily adjust/level the angle of each rod clamp through the provided knob in 360° Pan & Tilt Rotation, which gives extra flexibility, and thus you can mount cups to virtually any part of vehicle.

- You can adjust angle of Ball Levelling Camera Platform at any required angle in 360° rotation, and can be locked down with knob when you wish to capture shots in static position.

NOTE: Test all fixtures before driving.

YOUR PROAIM MEGAGRIP CAR/VEHICLE CAMERA MOUNT ALL DRESSED UP AND READY TO GO!
