Model and/or type reference	IQ7-60-X-Y-Z							
Rating(s)	See rating table							

Page 2 of 22

Specification	Units	IQ7
Rated output active power	W	240
Dutput apparent power	VA	240
Nominal output voltage	V _{rms}	230
Dutput voltage range	Vrms	184-276
Nominal output frequency	Hz	50
Dutput frequency range	Hz	45-55
C output current	A _{rms}	1.04
EN50530 efficiency	%	96.5
Full power MPPT input voltage	V	27-37
nput operating range	V	16-48
nput current limit region	V	16-27
nput frequency	Hz	DC
put maximum continuous current	A	10
C short circuit input maximum	А	15
gress protection		IP67
nvironmental category		Outdoor
/et locations		suitable
Pollution degree		PD3
mbient temperature		-40C to +65C
elative humidity		4K4H
laximum altitude		< 2000m
Overvoltage category		OVC III

Models IQ7-60-X-Y-Z are similar except as indicated above. Model nomenclature details:

Suffix X = 2, 5 or B

2 = Multicontact PV connector

- 5 = Amphenol PV connector
- B = Bulkhead PV connector
- Y = blank or ACM (X marking not required)

Z = blank or any letter for country of intended installation e.g.:

- INT = International
- FR = France
- NL = Netherlands
- DE = Germany

Mode and control of the inverter can be performed via PLC (Power Line Communication) with an external control gateway named Envoy.

There was reinforced isolation between the SELV DC input and the hazardous voltage AC output.

Firmware version: 520-00082-r01- v02.14.02

SUMMARY OF COMPLIANCE WITH ENA ERAC G99/1-3:2018

All tests passed the requirements of the ENA ERAC G99/1-3:2018 standard within the required limits and within the equipment uncertainties.

The system, consisting of Photovoltaic Micro-inverters model numbers IQ7-60-X-Y-Z **COMPLIED** with the tested clauses of ENA ERAC G99/1-3:2018.

Possible test case verdicts:

	N1/4
- test case does not apply to the test object:	N/A
- test object does meet the requirement:	P(Pass)
- test object does not meet the requirement:	F(Fail)
- informative information only:	Noted
Testing	
Date of receipt of test item:	May 2019
Date (s) of completion of tests:	March - April 2019

General remarks:

- 1. The test results presented in this report relate only to the object tested.
- 2. This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.
- 3. If the measured result complies up to the limit of acceptance, the result shall be reported along with our uncertainty of measurement. e.g. results to state window of uncertainty.
- 4. "(see Enclosure #)" refers to additional information appended to the report.
- 5. "(see appended table)" refers to a table appended to the report.
- 6. This report supersedes P2018062804 as G59/3-4 has been superseded by G99/1-3:2018 and firmware has been upgraded from 520-00082-r01-v02.12.02 to 520-00082-r01-v02.14.02.
- 7. New tests include
 - a. Operating range,
 - b. Removal of stage 1 over frequency and stage 1 under voltage tests,
 - c. adding of LFSM over frequency test

General product information:

The EUT (Equipment Under Test), known as Photovoltaic Micro-inverters, model IQ7 were supplied for testing to ENA ERAC G99/1-3:2018 by Enphase Energy Inc of 1420 North McDowell Boulevard, Petaluma, CA 94954, USA.

TRF No.: ENA ERAC G99/1-3:2018

1. The stated tolerances apply to the total tolerance of the leakage (touch) current circuit and metering Instrument.

- 2. Thermocouple not included in the Instrument accuracy of measuring range. Thermocouples type "T" premium grade, are recommended.
- 3. Not for measurements related to relative humidity.

Type Test Verification Report

Form A2-3: Compliance Verification Report for Inverter Connected Power Generating Modules

This form should be used by the **Manufacturer** to demonstrate and declare compliance with the requirements of EREC G99. The form can be used in a variety of ways as detailed below:

1. To obtain Fully Type Tested status

The **Manufacturer** can use this form to obtain **Fully Type Tested** status for a **Power Generating Module** by registering this completed form with the Energy Networks Association (ENA) Type Test Verification Report Register.

2. To obtain Type Tested status for a product

This form can be used by the **Manufacturer** to obtain **Type Tested** status for a product which is used in a **Power Generating Module** by registering this form with the relevant parts completed with the Energy Networks Association (ENA) Type Test Verification Report Register.

3. One-off Installation

This form can be used by the **Manufacturer** or **Installer** to confirm that the **Power Generating Module** has been tested to satisfy all or part of the requirements of this EREC G99. This form must be submitted to the **DNO** as part of the application.

A combination of (2) and (3) can be used as required, together with Form A2-4 where compliance of the **Interface Protection** is to be demonstrated on

site. Note:

Within this Form A2-3 the term **Power Park Module** will be used but its meaning can be interpreted within Form A2-3 to mean **Power Park Module**, **Generating Unit or Inverter** as appropriate for the context.

However, note that compliance must be demonstrated at the **Power Park Module** level.

If the **Power Generating Module** is **Fully Type Tested** and registered with the Energy Networks Association (ENA) Type Test Verification Report Register, the Installation Document (Form A3) should include the **Manufacturer's** reference number (the Product ID), and this form does not need to be submitted.

Where the **Power Generating Module** is not registered with the ENA Type Test Verification Report Register or is not **Fully Type Tested** this form (all or in parts as applicable) needs to be completed and provided to the **DNO**, to confirm that the **Power Generating Module** has been tested to satisfy all or part of the requirements of this EREC G99.

Manufacturers' Information:

Manufacturer compliance declaration. - I certify that all products supplied by the company with the above **Type Tested Manufacturer's** reference number will be manufactured and tested to ensure that they perform as stated in this document, prior to shipment to site and that no site **Modifications** are required to ensure that the product meets all the requirements of EREC G99.

Signed

On behalf of

Enphase Energy

Note that testing can be done by the **Manufacturer** of an individual component or by an external test house.

Where parts of the testing are carried out by persons or organisations other than the **Manufacturer** then that person or organisation shall keep copies of all test records and results supplied to them to verify that the testing has been carried out by people with sufficient technical competency to carry out the tests.

TRF No.: ENA ERAC G99/1-3:2018

Type Test Verification Report

A2-3 Compliance Verification Report –Tests for Type A Inverter Connected Power Generating Modules – test record

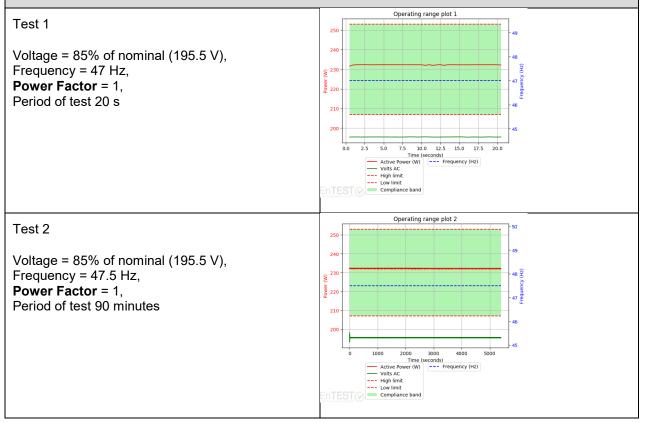

1. Operating Range: Two tests should be carried with the **Power Generating Module** operating at **Registered Capacity** and connected to a suitable test supply or grid simulation set. The power supplied by the primary source shall be kept stable within \pm 5 % of the apparent power value set for the entire duration of each test sequence.

Frequency, voltage and **Active Power** measurements at the output terminals of the **Power Generating Module** shall be recorded every second. The tests will verify that the **Power Generating Module** can operate within the required ranges for the specified period of time.

The Interface Protection shall be disabled during the tests.

In case of a PV **Power Park Module** the PV primary source may be replaced by a DC source.

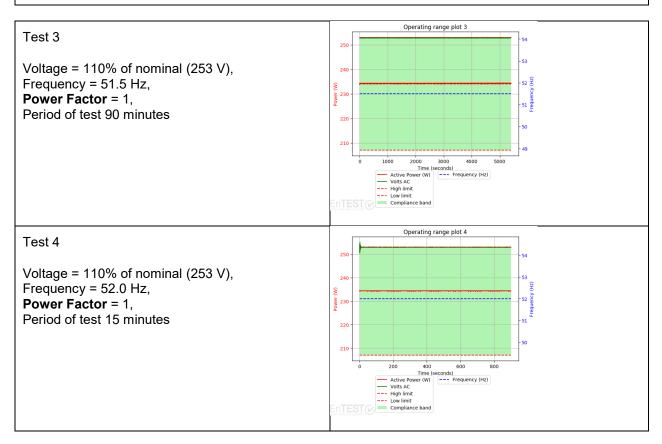

In case of a full converter **Power Park Module** (eg wind) the primary source and the prime mover **Inverter**/rectifier may be replaced by a DC source.

Type Test Verification Report

2. Power Quality – Harmonics:

For **Power Generating Modules** of **Registered Capacity** of less than 75 A per phase (ie 50 kW) the test requirements are specified in Annex A.7.1.5. These tests should be carried out as specified in BS EN 61000- 3-12 The results need to comply with the limits of Table 2 of BS EN 61000-3-12 for single phase equipment and Table 3 of BS EN 610000-3-12 for three phase equipment.

Power Generating Modules with emissions close to the limits laid down in BS EN 61000-3-12 may require the installation of a transformer between 2 and 4 times the rating of the **Power Generating Module** in order to accept the connection to a **Distribution Network**.

For **Power Generating Modules** of **Registered Capacity** of greater than 75 A per phase (ie 50 kW) the installation must be designed in accordance with EREC G5.

Power Generating Module rating per phase (rpp)				0.24 kVA		Measured Value per phase (kVA)

Type Test Verification Report

3. Power Quality – Voltage fluctuations and Flicker:

For **Power Generating Modules** of **Registered Capacity** of less than 75 A per phase (ie 50 kW) these tests should be undertaken in accordance with Annex A.7.1.4.3. Results should be normalised to a standard source impedance, or if this results in figures above the limits set in BS EN 61000-3-11 to a suitable Maximum Impedance.

For **Power Generating Modules** of **Registered Capacity** of greater than 75 A per phase (ie 50 kW) the installation must be designed in accordance with EREC P28.

	Starting				Stopping				Running		
	d max	dc	d(t)		d max	dc	d(t	.)	P st		P It 2 hours
Measured Values at test impedance	0.18	0.14	0.00)	0.16	0.03		0.00	0.10)	0.09
Normalised to standard impedance	0.18	0.14	0.00)	0.16	0.03		0.00	0.10)	0.09
Normalised to required maximum impedance	N/A	N/A	N/A		N/A	N/A		N/A	N/A	\	N/A
Limits set under BS EN 61000- 3-11	4%	3.3%	3.3%		4%	3.3%	3.3	3%	1.0		0.65
Test Impedance	R).4		Ω	XI		0.2	25		Ω
Standard Impedance	R		.24 *).4 ^		Ω	XI			5 * 5 ^		Ω
Maximum Impedance	R		N/A		Ω	XI		N/		Ω	

Type Test Verification Report

* Applies to three phase and split single phase Power Generating Modules. Applies to single phase Power Generating Module and Power Generating Modules using two phases on a three phase system For voltage change and flicker measurements the following formula is to be used to convert the measured values to the normalised values where the **Power Factor** of the generation output is 0.98 or above Normalised value = Measured value x reference source resistance/measured source resistance at test point Single phase units reference source resistance is 0.4 Ω Two phase units in a three phase system reference source resistance is 0.4Ω Two phase units in a split phase system reference source resistance is 0.24 Ω Three phase units reference source resistance is 0.24 Ω Where the **Power Factor** of the output is under 0.98 then the XI to R ratio of the test impedance should be close to that of the Standard Impedance. The stopping test should be a trip from full load operation. The duration of these tests need to comply with the particular requirements set out in the testing notes for the technology under test. Dates and location of the test need to be noted below Test start date 4 May 2018 Test end date 4 May 2018 Test location 1 Treffers Rd, Wigram, Christchurch, NZ 4. Power quality – DC injection: The tests should be carried out on a single Generating Unit. Tests are to be carried out at three defined power levels ±5%. At 230 V a 50 kW three phase Inverter has a current output of 217 A so DC limit is 543 mA. These tests should be undertaken in accordance with Annex A.7.1.4.4. Test power level 10% 55% 100% Recorded value in milli Amps 0.068 mA 0.079 mA 0.068 mA as % of rated AC current 0.0068% 0.0079% 0.0068% Limit 0.25% 0.25% 0.25%

Type Test Verification Report

5. Power Factor: The tests should be carried out on a single **Power Generating Module**. Tests are to be carried out at three voltage levels and at **Registered Capacity**. Voltage to be maintained within $\pm 1.5\%$ of the stated level during the test. These tests should be undertaken in accordance with Annex A.7.1.4.2.

Voltage	0.94 pu (216.2 V)	1 pu (230 V)	1.1 pu (253 V)	
Measured value	1.00	1.00	1.00	
Power Factor Limit	>0.95	>0.95	>0.95	

6. Protection – Frequency tests: These tests should be carried out in accordance with the Annex A.7.1.2.3.

Function	Setting		Trip test		"No trip tests"	
	Frequency	Time delay	Frequency	Time delay	Frequency /time	Confirm no trip
U/F stage 1	47.5 Hz	20 s	47.52 Hz	20.3 s	47.7 Hz 25 s	Confirmed
U/F stage 2	47 Hz	0.5 s	47.02 Hz	0.62 s	47.2 Hz 19.98 s	Confirmed
					46.8 Hz 0.48 s	Confirmed
O/F	52 Hz	0.5 s	51.98 Hz	0.59 s	51.8 Hz 89.98 s	Confirmed
					52.2 Hz 0.48 s	Confirmed

Note. For frequency trip tests the frequency required to trip is the setting ± 0.1 Hz. In order to measure the time delay a larger deviation than the minimum required to operate the projection can be used. The "No trip tests" need to be carried out at the setting ± 0.2 Hz and for the relevant times as shown in the table above to ensure that the protection will not trip in error.

Type Test Verification Report

7. Protection – Voltage tests: These tests should be carried out in accordance with Annex A.7.1.2.2.							
Function	Setting		Trip test		"No trip tests"		
	Voltage	Time delay	Voltage Time delay		Voltage /time	Confirm no trip	
U/V	0.8 pu (184 V)	2.5 s	182.3 V	2.56 s	188 V 3.50 s	Confirmed	
					180 V 2.48 s	Confirmed	
O/V stage 1	1.14 pu (262.2 V)	1.0 s	261.5 V	1.06 s	258.2 V 2.0 s	Confirmed	
O/V stage 2	1.19 pu (273.7 V)	0.5 s	271.0 V	0.56 s	269.7 V 0.98s	Confirmed	
					277.7 V 0.48 s	Confirmed	

Note for Voltage tests the Voltage required to trip is the setting ± 3.45 V. The time delay can be measured at a larger deviation than the minimum required to operate the protection. The No trip tests need to be carried out at the setting ± 4 V and for the relevant times as shown in the table above to ensure that the protection will not trip in error.

8.Protection – Loss of Mains test: These tests should be carried out in accordance with BS EN 62116. Annex A.7.1.2.4.

The following sub set of tests should be recorded in the following table.

Test Power and imbalance	33% -5% Q Test 22	66% -5% Q Test 12	100% -5% P Test 5	33% +5% Q Test 31	66% +5% Q Test 21	100% +5% P Test 10	
Trip time. Limit is 0.5s	94 ms	181 ms	170 ms	110 ms	96 ms	170 ms	

Loss of Mains Protection, Vector Shift Stability test. This test should be carried out in accordance with Annex A.7.1.2.6.

	Start Change Frequency		Confirm no trip
Positive Vector Shift	49.5 Hz	+50 degrees	Confirmed
Negative Vector Shift	50.5 Hz	- 50 degrees	Confirmed

Type Test Verification Report

12. Self-Monitoring solid state switching: No specified test requirements. Refer to Annex A.7.1.7.						
It has been verified that in the event of the solid state switching device failing to disconnect the Power Park Module , the voltage on the output side of the switching device is reduced to a value below 50 volts within 0.5 s.						
13. Wiring functional tests: If required by para 15.2.1.						
Confirm that the relevant test schedule is attached (tests to be undertaken at time of commissioning)	NA					
14. Logic interface (input port).						

Confirm that an input port is provided and can be used to shut down the module.	Yes
Additional comments.
