

A close-up, low-angle shot of several rows of industrial fan blades. The blades are metallic and curved, creating a strong sense of depth and repetition. The lighting is dramatic, highlighting the metallic texture and the curves of the blades against a dark background.

Your supplier for industrial fans and external fan units

**wistro**

Elektro-Mechanik GmbH

## WISTRO sees itself...

...as a problem solver for our customers when it comes to industrial ventilation. This is backed by a team of highly motivated design engineers, technicians and many more with their ideas and creativity. For more than 25 years, we live the feeling being a German mid-sized company - every day. WISTRO is a second-generation family-run business.

The following pages will not only present our products but also provide a look behind the "blue label" with the six letters. What can you expect from us? Who are we? What is our philosophy? Why are we the right partner for your company?

## Experienced, reliable, flexible...

...have always been our three concepts and you will find them wherever we publicly appear. What does that mean to us?

**Experience** - Defines itself in more than 25 years' success of the company. During this time, we experienced exceptional transformations. Our activities and products have undergone major changes in respect of new technologies, processes and types of communication, accompanied by an increasing application of IT up to Industry 4.0. This experience has an influence on our products and services, and it supports us in future orientation of our customers and company.

**Reliable** - Acting predictably at any time, together with the approved WISTRO quality of our products and services appreciated by our customers and cooperating partners, defines our idea of this concept. With the combination of established products and the willingness to break new ground, we make "reliability" more than just a word.

**Flexible** - The increasing complexity of our daily activities requires a flexible acting beyond the usual processes. Product supply on short notice or product application to satisfy our customers' needs – you can rely on WISTRO.

## Quality is more...

...than high-quality and modern products complying with legal requirements. Quality is moreover defined by smooth processes at the point where our customers and cooperating partners make contact with us. Short distances, quick information and binding statements.

## Continuous development...

...as part of our daily activities. Whether external or internal communication took place, we ensure continuous change, optimisation and development by a long-practised philosophy. For complying with legal standards we refer to our membership in the Mechanical Engineering Industry Association (VDMA). We can recognise tendencies at an early stage to take appropriate measures. In the field of technical innovation we refer to our long-term cooperation with the University of Hanover. The result is a framework of internal and external sources of information that ensure a continuous development.

## Our environment...

...is more than only ISO 14.001 for us. Efficient processes and executions provide the base for resource-saving procedures in material usage and lowest possible emissions. This approach is supported by latest mechanical equipments and a respective infrastructure. To make ourselves constantly aware of this principle and as a proof to our partners, we created the WISTRO Sustainability logo. We care for our environment.

# Our certificates...

offering a third party confirmation on our daily-live principles.

UL/CSA certification

ISO 9.001 TÜV NORD

ErP2015 conformity
