AMERICA'S #1 SUPPLEMENT FOR ORAL HEALTH AND MOBILITY

"It Really Does Work!"
"First year I don't have to
have my Yorkie's teeth
cleaned. No stress on Bella"

-Joni & Bella- Parker, CO

INFLAMMATION (GINGIVITIS)

Inflamed, painful mouths that can lead to chronic mouth infection. Unaddressed gum inflammation can contribute to the damage of joints and organs (i.e: liver, kidney and heart, etc.).

Scan to check your pet
for gum disease

BAD BREATH

The foul odor is produced by active bacterial growth.

©Elite Science 2022

PLAQUE

Plaque is a sticky deposit on teeth where bacteria proliferate. Plaque around the gum margins can lead to gingivitis (inflammation). It can be easily removed.

Scan to check your pet
for plaque

TARTAR (CALCULUS)

Tartar is calcified plaque that traps bacteria, which can lead to gum disease (pain, inflammation). It requires mechanical removal via a dental cleaning. If mild, dental products can assist in removal.

STOMATITIS

Stomatitis is a chronic and very painful, inflammation of the mouth with persistent ulcers. It can impact the gums, pharynx, the inside of the cheek and tongue.
