

# Print an eco car!

To make your paper electric smart car, print out this page, then carefully cut around the outside of the car and charging unit. Be extra careful to not cut off the tabs. Next add a small amount of glue to each tab and fold along edges, then glue together like we have here!

Here's one we made!

## Top tip!

Make a mini charging unit to go with your car! Stick these graphics onto an empty raisin box and then place a shoelace inside the box as your lead! Finally cut a small hole in your car where you can charge it!
