### Operating Instructions

Use a suitable extension lead  
Close the spray knob on the hose handle and press the switch to the 0 (off)

### Filling

- Unscrew the lid of the tank and add your disinfectant.  
- Do not add more than 5 litres of liquid to the tank.  
- Do not mix the disinfectant in the tank; pre-mix in a suitable container and then add to the tank.  
- Mix the disinfectant according to the label directions.

### Placement during Operation

- Never place fogger directly on the floor, always elevate to keep dust and moisture out of fogger. (Shoulder strap is included and can be attached to the machine)  
- Do not operate fogger in enclosed or small areas for more than 30 minutes.

### Operation

- Turn the spray knob one quarter turn to half a turn – To deliver a ULV (Ultra low volume)  
- The spray cannot be seen as the droplets are very small.  
- Turn the spray knob one full turn to great a powerful mist.  
- Adjust the spray knob to suit the mist (fog) you desire.

### Important

When you have finished fogging the room  
Very Important – Firstly Turn off the spray knob – after 5 seconds turn off the power, to avoid any droplets of water flowing back into the hose and eventually reaching and destroying the motor.

### Care & Maintenance

- Always empty and flush the tank after each use, never leave disinfectant in the tank for extended periods.  
- Inspect spray house and electric cord for wear or damage.  
- Clean the filter regularly to protect the motor.

### Trouble Shooting

- **Problem:** Machine is not turning on  
- **Solution:** Check if the power switch is in l (ON) position, check that the plug is securely inserted, check the rcd – press the orange button – red light should be on (green button is reset button, if there is leakage it will automatically reset).
**Problem:** Fog and power mist weak  
**Solution:** Tighten the tank cap

**Problem:** Liquid forms around the base of the motor housing.  
**Solution:** Unit may have been operating too long and fog droplets are forming on the machine

**Problem:** Fogger becomes very warm (hot) during normal operation  
**Solution:** Remove the filter and clean (may need replaced)

**Warranty Service**

- Back to base warranty – customer has to pay for shipping (both ways)
- One year warranty guarantee service for main parts, while o ring and sponge only three months.
- The following are not in the scope of the warranty
- Damages to metal parts, hose, rubber parts because of using liquids with high strength corrosion.
- Not following the instruction manual during operation or maintenance.
- Damage cause by improper operation or overloading usage.
- Change the copper brush every 300 hours of usage.

**Precautions**

- This sprayer cannot spray or be filled with flammable, explosive and corrosive substances such as alcohol, gasoline, benzene and high concentration disinfectant (Disinfectant must be diluted before use)

- Please do not use the fogger in a closed room. After fogging is finished, close the doors and windows to increase the application effect.

- Clean the tank with water, care must be taken not to allow water to flow into the motor casing.

- After each use, the unused disinfectant must be poured out of the tank and disposed of to not pollute the environment. It is very important and necessary to add water to the tank and start spraying for 30-60 seconds to clean the machines pipelines to avoid corrosion and to increase the service life of the machine.

- To not place the machine in a high temperature environment and store away from direct sunlight.
