## Phantom Joint Protectors

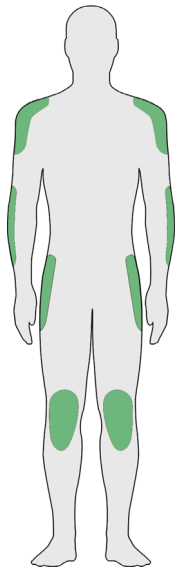

LEVEL 2 PROTECTION | EN 1621-1:2012

**SAS-TEC**  
body protection systems

Extremely flat, ultra-flexible protectors in SAS-TEC's Tripleflex design. They retain their high flexibility (even in cold or wet conditions) and are reusable after impact. In order to contour the elements around the body smoothly, this armor features a TPU coated, tear-resistant elastic fabric on the flat back side.

### For Armor-Ready Motorcycle Jackets & Pants

All pads in this set can be used in any joint protection pockets on a motorcycle safety garment. Place them where they comfortably fit! The size included is effective for protecting hips, shoulders, knees, or elbows.

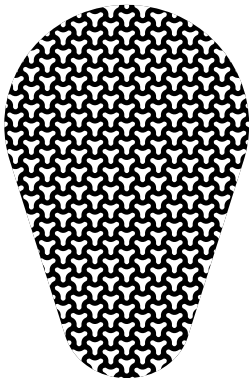

# How to Place Your Armor

This armor is designed to be worn with the textured elements facing the body and the fabric backing outwards. The purpose is for the fabric to compress the viscoelastic PU foam grid closer, providing more effective force distribution and greater impact protection.
